

SFHCHS23 - SQA Code HC9R 04

Carry out intravenous infusion

Overview

This standard covers setting up equipment and attaching prescribed intravenous fluids to existing intravenous cannulae. This procedure may be performed with adults or children and will usually take place in hospital with individuals receiving health care. It may also take place in a therapeutic, research or emergency situation.

You will need a firm knowledge and understanding of this procedure based upon your employers protocols, guidelines and patient group directives, where used. You will be working without direct supervision but according to agreed protocols.

Users of this standard will need to ensure that practice reflects up to date information and policies.

Carry out intravenous infusion

Performance criteria

- You must be able to:*
- P1 apply standard precautions for infection prevention and control any other relevant health and safety measures
 - P2 check the individual's identity and confirm the planned activity
 - P3 give the individual relevant information, support and reassurance in a manner which is sensitive to their needs and concerns
 - P4 gain valid consent to carry out the planned activity
 - P5 confirm required intravenous fluid to be administered in accordance with agreed protocols
 - P6 confirm intravenous fluid to be administered is within date and clear, and that all seals are intact
 - P7 ensure the administration set is:
 - P7.1 connected to the fluid container in a way that ensures no contamination or leakage
 - P7.2 connected to the cannula in a manner which avoids contamination and leakage
 - P7.3 correctly primed
 - P8 adjust the fluid administration rate according to the needs of the individual and the fluid being administered
 - P9 record all processes accurately and legibly
 - P10 inspect the cannulation site and lines at regular intervals according to agreed protocols and take appropriate action if required
 - P11 monitor the individual's condition regularly and seek clinical advice and support from an appropriate member of the team when events or risks are beyond your level of competence

Carry out intravenous infusion

Knowledge and understanding

You need to know and understand:

- K1 the current European and National legislation, national guidelines, organisational policies and protocols in accordance with Clinical/Corporate Governance which affect your work practice in relation to carrying out intravenous infusion
- K2 your responsibilities and accountability in relation to the current European and National legislation, national guidelines and local policies and protocols and Clinical/Corporate Governance
- K3 the duty to report any acts or omissions in care that could be detrimental to yourself, other individuals or your employer
- K4 the importance of applying standard precautions to carrying out intravenous infusion and the potential consequences of poor practice
- K5 the importance of working within your own sphere of competence when and seeking advice when faced with situations outside your sphere of competence
- K6 the significance of risks associated with the administration of intravenous fluids
- K7 current evidence based practice related to the management of risks associated with the administration of intravenous fluids
- K8 the importance of maintaining strict asepsis when preparing, attaching and connecting intravenous fluids
- K9 the significance of risks associated with the administration of intravenous fluids
- K10 the anatomy and physiology of the circulatory system in relation to the administration of intravenous fluids
- K11 the importance of and the methods of regular cleaning and maintenance of the cannula site
- K12 the approved methods of checking the patency of inserted cannula
- K13 the clinical indications of infection in the cannula site and the actions you would take if signs of infection are apparent
- K14 the procedures for preparing fluids for administration including drug additions
- K15 the possible adverse reactions to intravenous fluids and actions to be taken
- K16 methods of calculating flow rate of intravenous infusion
- K17 methods for controlling flow rate
- K18 methods for attaching and setting infusion pumps
- K19 the types of intravenous fluids available and their characteristics, indications and contra-indications
- K20 the different types of administration sets available and the circumstances when each may be used
- K21 the potential hazards associated with intravenous infusion administration
