

Overview

This standard applies to individuals who prepare technical information to realise designs. This could include information about materials, fixtures, fittings or mechanisms.

Performance criteria

You must be able to:

Identify methods

1. check that you have sufficient information about the requirements for drawings and other technical information and the time and resource constraints
2. select relevant methods, media and scale for producing technical information

Create technical information

3. use effective methods which convey technical requirements for others
4. check that technical information is complete, accurate and complies with design information and industry technical conventions
5. label and reference technical information in line with requirements
6. verify that technical information contains sufficient information for the intended use and is completed within agreed deadlines

Knowledge and understanding

You need to know and understand:

1. what is required for design realisation
2. who to consult and work with to verify that technical information meets requirements for design realisation
3. the intended purpose for the technical information
4. how to select and apply suitable industry conventions, methods and media to create technical information
5. how to include information about materials, finishes and fittings in technical information
6. how to maintain record systems of drawings and associated technical information
7. the different types of method and media for producing drawings and associated technical information

Create technical information to enable design realisation
