

Draft National Unit Specification

Unit title: Electrical and Electronic Systems (National 5)

SCQF: level 5 (6 SCQF credit points)

Unit code: to be advised

Unit outline

The general aim of this Unit is to develop an understanding of electrical and electronic control systems. Learners will investigate and explore engineering problems and design, simulate, construct, test and evaluate solutions.

Learners who complete this Unit will be able to:

- 1 Develop analogue electronic control systems
- 2 Develop digital electronic control systems

This Unit is a mandatory Unit of the Engineering Science (National 5) Course and is also available as a free-standing Unit. The Unit Specification should be read in conjunction with the *Unit Support Notes* which provides advice and guidance on delivery, assessment approaches and development of skills for learning, skills for life and skills for work. Exemplification of the standards in this Unit is given in the *National Assessment Resource*.

Recommended entry

Entry to this Unit is at the discretion of the centre. However, learners would normally be expected to have attained the skills, knowledge and understanding required by one or more of the following or equivalent qualifications and/or experience:

- ◆ Numeracy (SCQF level 4)
- ◆ Electrical and Electronic Systems (National 4)

In terms of prior learning and experience, relevant experiences and outcomes may also provide an appropriate basis for doing this Unit. Further information on relevant experiences and outcomes will be given in the *Unit Support Notes*.

Equality and inclusion

This Unit Specification has been designed to ensure that there are no unnecessary barriers to learning or assessment. The individual needs of learners should be taken into account when planning learning experiences, selecting assessment methods or considering alternative evidence. For further information please refer to the *Unit Support Notes*.

Standards

Outcomes and assessment standards

Outcome 1

The learner will:

1 Develop analogue electronic control systems by:

- 1.1 Analysing problems using the systems approach
- 1.2 Describing a range of analogue components and their functions and purpose within a circuit
- 1.3 Drawing circuit diagrams of analogue electronic circuits
- 1.4 Using simple formulae to calculate appropriate component values
- 1.5 Simulating or constructing analogue electronic control systems
- 1.6 Testing and evaluating analogue electronic solutions against a specification

Outcome 2

The learner will:

2 Develop digital electronic control systems by:

- 2.1 Analysing problems using the systems approach
- 2.2 Describing a range of digital components and their functions
- 2.3 Constructing flowcharts and programs for digital control systems
- 2.4 Simulating or constructing digital control systems
- 2.5 Testing and evaluating digital electronic solutions against a specification

Evidence Requirements for the Unit

Assessors should use their professional judgement, subject knowledge and experience, and understanding of their learners, to determine the most appropriate ways to generate evidence and the conditions and contexts in which they are used.

For this Unit, learners will be required to demonstrate technological skills, knowledge and understanding in the context of electrical and electronic systems.

Evidence of Outcomes may take many forms, including oral or written evidence, or may be demonstrated by carrying out practical tasks. Evidence of Outcomes and Assessment Standards may be generated during one or more activities.

Exemplification of assessment will be provided in the *National Assessment Resource*. Advice and guidance on possible approaches to assessment is provided in the *Unit Support Notes*.

Development of skills for learning, skills for life and skills for work

It is expected that learners will develop broad, generic skills through this Unit. The skills that learners will be expected to improve on and develop in this Unit are based on SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work* and drawn from the main skills areas listed below. These must be built into the Unit where there are appropriate opportunities.

2 Numeracy

- 2.1 Number processes
- 2.3 Information handling

4 Employability, enterprise and citizenship

- 4.2 Information and communication technology (ICT)

5 Thinking skills

- 5.3 Applying
- 5.4 Analysing and evaluating

Amplification of these is given in SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work*. The level of these skills should be at the same SCQF level of the Unit and be consistent with the SCQF level descriptor. Further information on building in skills for learning, skills for life and skills for work is given in the *Unit Support Notes*.
