SECTION A—Questions 1—30 (30 Marks)
Instructions for completion of Section A are given on Page two.
For this section of the examination you must use an HB pencil.

SECTIONS B AND C (100 Marks)
1 (a) All questions should be attempted.
(b) It should be noted that in Section C questions 1 and 2 each contain a choice.
2 The questions may be answered in any order but all answers are to be written in the spaces provided in this answer book, and must be written clearly and legibly in ink.
3 Additional space for answers will be found at the end of the book. If further space is required, supplementary sheets may be obtained from the Invigilator and should be inserted inside the front cover of this book.
4 The numbers of questions must be clearly inserted with any answers written in the additional space.
5 Rough work, if any should be necessary, should be written in this book and then scored through when the fair copy has been written. If further space is required, a supplementary sheet for rough work may be obtained from the Invigilator.
6 Before leaving the examination room you must give this book to the Invigilator. If you do not, you may lose all the marks for this paper.
Read carefully

1. Check that the answer sheet provided is for Biology Higher (Revised) (Section A).
2. For this section of the examination you must use an HB pencil, and where necessary, an eraser.
3. Check that the answer sheet you have been given has your name, date of birth, SCN (Scottish Candidate Number) and Centre Name printed on it.
   Do not change any of these details.
4. If any of this information is wrong, tell the Invigilator immediately.
5. If this information is correct, print your name and seat number in the boxes provided.
6. The answer to each question is either A, B, C or D. Decide what your answer is, then, using your pencil, put a horizontal line in the space provided (see sample question below).
7. There is only one correct answer to each question.
8. Any rough working should be done on the question paper or the rough working sheet, not on your answer sheet.
9. At the end of the examination, put the answer sheet for Section A inside the front cover of this answer book.

Sample Question

The apparatus used to determine the energy stored in a foodstuff is a

A  calorimeter  
B  respirometer  
C  klinostat  
D  gas burette.

The correct answer is A—calorimeter. The answer A has been clearly marked in pencil with a horizontal line (see below).

Changing an answer

If you decide to change your answer, carefully erase your first answer and using your pencil fill in the answer you want. The answer below has been changed to D.
SECTION A
All questions in this section should be attempted.
Answers should be given on the separate answer sheet provided.

1. The graph below shows the temperature changes involved in one cycle of the polymerase chain reaction (PCR).

   ![Temperature Graph]

   Which letter indicates when primers would bind to target sequences of DNA?

2. Which of the following statements related to cell differentiation is correct?
   A Meristems are regions of differentiated cell types in plants.
   B Embryonic stem cells can differentiate into a limited range of cell types.
   C A differentiated cell only expresses genes that produce proteins characteristic of that cell type.
   D Adult tissue stem cells can differentiate into all cell types.

3. The graph below shows the changes in number of human stem cells in a culture. The activity of the enzyme glutaminase present in the cells over an eight day period is also shown.

   ![Cell Number and Glutaminase Graph]

   How many units of glutaminase activity were recorded when the cell number was 50% of its maximum over the eight day period?
   A 3
   B 4
   C 8
   D 9

4. Genetic drift is a change in gene frequency, particularly in small populations.

   Which of the following is true of genetic drift?
   A It is random and influenced by the founder effect.
   B It is non-random and influenced by the founder effect.
   C It is random and influenced by natural selection.
   D It is non-random and influenced by natural selection.
5. The diagram below shows a section of a chromosome and the locations of ten genes.

1 2 3 4 5 6 7 8 9 10

A mutation during cell division resulted in the following sequence of genes on the same chromosome.

1 2 3 4 5 6 7 8 9 10

The type of mutation involved in this example is
A deletion
B translocation
C duplication
D inversion.

6. The diagram below represents stages in the evolution of *Triticum aestivum* (bread wheat). The diploid chromosome numbers of some species involved are given.

*Triticum monococcum* (2n = 14) × *Wild Triticum species* (2n = 14)

Sterile hybrid 1

Total nondisjunction

*Triticum turgidum* × *Triticum tauschii*

Sterile hybrid 2

Total nondisjunction

*Triticum aestivum* (bread wheat) (2n = 42)

Which conclusion can be drawn from the graph?
A *Homo sapiens* is the most intelligent species.
B *Homo neanderthalensis* had the largest brain.
C *Homo sapiens* evolved from *Homo erectus*.
D The more recently the species lived the larger its brain volume.

7. The graph below shows the average brain volume of several related species of hominid and the time periods during which they lived.

![Graph showing average brain volume and time periods for hominid species.]

**Key**

P – *Australopithecus afarensis*
Q – *Homo habilis*
R – *Homo erectus*
S – *Homo sapiens* (modern humans)
T – *Homo neanderthalensis*

Which line in the table below indicates correctly the diploid chromosome numbers of *Triticum turgidum* and *Triticum tauschii*?

<table>
<thead>
<tr>

11. Bacterial cells were heated to 121°C for increasing lengths of time to determine the number of live cells left after treatment. The graph below shows the number of bacterial cells which survived.

How many cells survive after 6 minutes?
A  1300  
B  4000  
C  5000  
D  5500

12. The final electron acceptor in the electron transport chain of respiration is
A  NADH  
B  water  
C  ATP  
D  oxygen.

13. The graph below shows the relationship between air temperature and the body temperature of two animal species X and Y.

Which line in the table below correctly describes species X and Y?

<table>

14. The diagram below shows the regeneration of ATP in a cell.

The following statements relate to this diagram.
1  Reaction X releases energy for anabolic pathways. 
2  Reaction Y releases energy for anabolic pathways. 
3  Reaction X is catalysed by ATP synthase. 
4  Reaction Y is catalysed by ATP synthase.

Which statements are correct?
A  1 and 3  
B  1 and 4  
C  2 and 3  
D  2 and 4
15. The diagram below shows a section through the skin of a mammal.

Which line in the table below correctly identifies the state of the erector muscle and the change in blood flow in the capillary which would be expected if the skin was exposed to low temperature?

<table>

16. The giant bullfrog of South Africa lives in a habitat in which hot and dry conditions can occur at any time of year. To survive these conditions, the frogs respond by becoming dormant.

Which of the following descriptions applies to this type of dormancy?

A Predictive aestivation
B Predictive hibernation
C Consequential aestivation
D Consequential hibernation

17. Using recombinant DNA technology, the bacterium *E. coli* can be modified so that it can produce human insulin. The following steps are involved.

1 Culture large quantities of *E. coli* in nutrient medium.
2 Insert human insulin gene into *E. coli* plasmid DNA.
3 Cut insulin gene from human chromosome using enzymes.
4 Extract insulin from culture medium.

The correct order of these steps is

A 3, 2, 1, 4
B 3, 1, 2, 4
C 1, 4, 3, 2
D 1, 2, 3, 4.

18. The diagram below shows an image of a bacterial cell that has been magnified 1500 times.

What is the actual length of the cell in micrometres (µm)?

A 0.003
B 3.000
C 6750
D 6.750

</tr>
</tbody>
</table>

The social hierarchy among the chickens with the most dominant bird first is

A  Y, Z, W, X
B  X, W, Z, Y
C  Y, W, Z, X
D  X, Z, W, Y.
21. The diagram below shows interaction between two strains of fungi X and Y with different genotypes in an area Z.

Which statement describes the process occurring in area Z?
A mutagenesis  
B selective breeding  
C transfer of plasmids  
D sexual reproduction

22. The following statements refer to photosynthesis.
1 Carbon dioxide is fixed by RuBisCO.
2 Sugar molecules are combined to form starch.
3 G3P is used to regenerate RuBP.
Which of the statements correctly refer to the Calvin cycle?
A 1 and 2 only  
B 1 and 3 only  
C 2 and 3 only  
D 1, 2 and 3

23. Natural selection reduces in-breeding depression in self-pollinating plant species by eliminating
A deleterious alleles  
B recessive alleles  
C mutated alleles  
D dominant alleles.

24. Crop pests may be controlled by various methods.
Which control methods are used in integrated pest management?
A biological only  
B systemic and selective chemicals  
C selective chemicals only  
D chemical and biological

25. The numbers of plants of five different species present in two plant communities were counted.
Community X was grazed by deer.
Community Y had deer excluded by fences.
The results are shown in the table below.

<table>
<thead>
<tr>
<th>Plant species</th>
<th>Number of plants present</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Plant community X</td>

<tr>
<td>2</td>
<td>325</td>
</tr>
<tr>
<td>3</td>
<td>341</td>
</tr>
<tr>
<td>4</td>
<td>319</td>
</tr>
<tr>
<td>5</td>
<td>315</td>
</tr>
</tbody>
</table>

Based on the information given, which comparison of plant community X with community Y is correct?
In comparison with plant community X, community Y has
A the same species richness but a lower species diversity  
B the same species richness and a higher species diversity  
C different species richness but lower species diversity  
D different species richness and higher species diversity.
26. Mink is a naturalised mammal in many parts of the UK.

A program designed to control mink numbers in a region of Scotland was started at the end of May 2009. The population of adult animals was surveyed every three months for a year and the results are shown in the table below.

<table>
<thead>
<tr>
<th>Survey date</th>
<th>Population of adult mink</th>
</tr>
</thead>
<tbody>
<tr>
<td>End May 2009</td>
<td>1250</td>
</tr>
<tr>
<td>End August 2009</td>

</tr>
<tr>
<td>End February 2010</td>
<td>340</td>
</tr>
<tr>
<td>End May 2010</td>
<td>50</td>
</tr>
</tbody>
</table>

What was the average decrease in number of adult mink per month during the programme?

A  100  
B  240  
C  243  
D  582

27. Northern elephant seals have very low genetic variation caused by a catastrophic decline in numbers of this species due to over-hunting by humans.

Present day animals have all descended from the small number that survived.

What term is used to refer to the loss of genetic variation associated with a serious decline in population?

A  Founder effect  
B  Stabilising selection  
C  Bottleneck effect  
D  Directional selection

28. The list of statements below refers to advantages gained by hunting behaviour.

1  Much larger prey may be killed than by hunting alone.
2  Both dominant and subordinate animals benefit.
3  Individuals gain more energy than by hunting alone.

Which of the statements could be true of cooperative hunting?

A  1 and 2 only  
B  1 and 3 only  
C  2 and 3 only  
D  1, 2 and 3

29. Cod is an important fish species which is caught for human food.

The graph below shows changes in the estimated biomass of cod stocks in a region of the North Sea between 1960 and 2000.

Which line in the table correctly shows the overall decrease in estimated cod biomass in this region in the ten year periods shown?

<table>
<thead>
<tr>
<th>Ten year period</th>
<th>Decrease in estimated cod biomass in the region (tonnes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A 1960 and 1970</td>

Candidates are reminded that the answer sheet MUST be returned INSIDE the front cover of this answer booklet.

[Turn over]
1. The diagram below shows part of a DNA molecule during replication and other molecules associated with it.

(a) Name molecule X which is associated with the tightly coiled DNA.

(b) Name the type of bond shown at Y.

(c) Name base Z.

(d) Underline one word in each pair to make the sentence correct.

DNA is a double stranded \( \left\{ \begin{array}{l} \text{parallel} \\ \text{antiparallel} \end{array} \right\} \) molecule with deoxyribose and \( \left\{ \begin{array}{l} \text{bases} \\ \text{phosphate} \end{array} \right\} \) at the 3’ and 5’ ends of each strand respectively.

(e) State the role of DNA polymerase in the process of DNA replication.
2. The diagram below shows a molecule of tRNA. A section of the diagram has been enlarged.

(a) **Complete the enlarged section of the diagram** by inserting the letters of the complementary bases.

(b) Using the letter P, **label the diagram** to show the position of the amino acid attachment site.

(c) Name part X and explain its importance in the process of translation.

3. The diagram below shows stages involved in the transcription and translation of a eukaryotic gene. Both introns and exons are transcribed and then the primary transcript is modified to produce the functional mRNA which is then translated.

(a) State the difference between introns and exons.

(b) Name the enzyme responsible for the synthesis of the primary transcript.

(c) Name the process that involves the modification of the primary transcript to form the functional mRNA.

(d) Describe how different functional mRNA molecules can be produced from the same primary transcript sequence.

(e) Describe one way in which the polypeptide structure can be modified following translation.
[Turn over for Question 4 on Page sixteen
4. Different varieties of banana can have different numbers of chromosome sets in their cells. Banana flesh contains carotenoids and different varieties have different carotenoid contents. Extracts of five different varieties of banana were placed in a colorimeter to measure the transmission of light through them. The darker the flesh the lower the percentage of light transmitted.

The results are shown in the table below.

<table>
<thead>

<td>0·0</td>
</tr>
</tbody>
</table>

(a) (i) Identify the independent variable in this investigation.

(ii) Identify one variable, not already mentioned, which would have to be kept constant so that valid conclusions could be drawn.

(iii) Explain why the flasks were left for 10 minutes before the yeast suspension was added.
8. (a) (continued)

(iv) Explain why the flasks were left for a **further** 10 minutes **after** the yeast suspensions were added before measurements of oxygen concentrations were taken.

(b) On the grid provided, draw a line graph to show the oxygen concentration in **Flask A** against time. Use appropriate scale to fill most of the grid.

(Additional graph paper, if required, will be found on Page forty.)

(c) Using information from the table, state the effect of increasing lead ion concentration on the aerobic respiration of yeast.

(d) Bubbles of carbon dioxide appeared in both flasks throughout the investigation. Explain why this gas continued to be produced in **Flask A** after 120s.
9. Rufous hummingbirds migrate thousands of kilometres each year between their summer breeding areas in Canada and their wintering areas in Mexico. They feed on nectar throughout the year and save energy at night by entering a temporary state known as torpor in which body temperature and respiration rate are greatly reduced.

The chart below shows the average body mass of the hummingbirds and the average number of hours per night spent in torpor throughout the year.

(a) (i) Use values from the chart to describe the changes in average body mass of the hummingbirds from the beginning of August until the end of January.

(ii) Calculate the percentage increase in average body mass during the summer in Canada.

Space for calculation

Marks

2

1
9. (a) (continued)

(iii) Suggest one reason for the increase in body mass of the birds during the summer in Canada.

__________________________________________________________________________

(b) (i) Suggest why the increased time spent in torpor during migration is an advantage to the birds.

__________________________________________________________________________

(ii) Calculate the average period of torpor per month throughout the winter in Mexico.

*Space for calculation*

____________ hours per night

(c) The table below shows how the average oxygen consumption of the birds at rest is affected by their body temperature.

<table>
<thead>
<tr>

Using information from the chart and the table, calculate the average volume of oxygen consumed per hour by a hummingbird at the end of September at normal body temperature.

*Space for calculation*

____________ cm³

(d) Describe a technique which could be used to track species such as the rufous hummingbird which undertake long distance migration.

10. *Escherichia coli* is a species of bacteria found in the lower intestines of humans. Sections of the DNA of two strains of *E. coli* are shown below.

Gene B codes for a protein known as Shiga toxin which can cause serious food poisoning in humans.

<table>
<thead>
<tr>
<th>Strain of <em>E. coli</em></th>
<th>Section of DNA</th>
</tr>
</thead>
<tbody>
<tr>
<td>0157H7</td>
<td>Gene A</td>
</tr>
<tr>
<td>K12</td>
<td>Gene A</td>
</tr>
</tbody>
</table>

(a) The gene for Shiga toxin has been acquired by *E. coli* 0157H7.

Give two methods by which the bacterial strain could have acquired this gene.

1. ____________________________________________ 2
2. ____________________________________________

(b) (i) *E. coli* K12 is routinely used in recombinant DNA technology. Explain why *E. coli* K12 is used whereas *E. coli* 0157H7 is not.

______________________________________________ 1

(ii) Bacteria are used in recombinant DNA technology.

Explain why animal DNA which has been transferred to bacteria may produce proteins which are not functional.

______________________________________________ 1
11. A growth curve in a culture of bacteria is shown in the diagram below.

(a) In culturing bacteria it is important to control the pH of the culture medium. Describe how the pH of a culture medium can be controlled.

(b) (i) Name each of the phases of growth indicated by letters on the graph.

W __________________________
X __________________________
Y __________________________
Z __________________________

(ii) Give the letter which indicates a region of the graph in which most enzymes are being induced to metabolise the available substrate.

Letter __________________________

(iii) Give one reason for the decrease in number of cells at phase Z.

__________________________________________________________

12. (a) The unicellular organism Trypanosoma brucei is a parasite which attacks the human nervous system causing sleeping sickness.

Sleeping sickness occurs in regions of the world such as Africa where tsetse flies are found.

The diagram below shows how the tsetse flies are involved in the transmission of sleeping sickness.

The tsetse fly bites a human whose blood is infected with *T. brucei*.

The saliva of the tsetse fly now infected with *T. brucei* but the fly is not affected by the parasite.

The tsetse fly bites another human releasing *T. brucei* into their blood.

(i) Give the meaning of the term parasite.

(ii) Parasitism is one form of symbiosis.

Name one other type of symbiosis.

(iii) The tsetse fly transmits *T. brucei* from one human to another.

Give the term which describes organisms which transfer parasites to hosts.

(b) (i) In an effort to control sleeping sickness in a region of Africa, infertile male tsetse flies were released into wild fly populations.

Suggest how this measure could reduce the number of cases of sleeping sickness in this region.
12. (b) (continued)

(ii) The release of infertile male tsetse flies is a form of biological control. Describe one other form of biological control of a pest.

________________________________________________________________________

________________________________________________________________________ 1

(iii) Identify a possible risk to a food web which could be associated with the use of a biological control method.

________________________________________________________________________

13. Red Fife and Coteau are cultivars of wheat. Their grain is grown for bread-making. A field trial was carried out to compare their economic and biological yields. Equal numbers of plants of each cultivar were grown in 16 field plots for six months as shown in the diagram below.

The graph below shows the average economic yield of grain and the average yield of the remaining plant biomass from samples of each cultivar.

(a) In designing a field trial, account should be taken of the factors in the list below.

A selection of treatments
B number of replicates
C randomisation of treatments

Complete the table below using letters from the list to match the reasons for taking the factors into account.

<table>
<thead>
<tr>
<th>Factor to be taken into account</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>To take account of the variability within samples.</td>
<td></td>
</tr>
<tr>
<td>To ensure fair comparisons.</td>
<td></td>
</tr>
<tr>
<td>To eliminate bias when measuring the treatment effects.</td>
<td></td>
</tr>
</tbody>
</table>
13. (continued)

(b) Give one precaution, not already mentioned, which would have to be taken so that the comparison of the yields from each cultivar was valid and explain the reason for it.

Precaution

Reason

2

(c)  (i) Red Fife has a harvest index of 0.2.

Calculate the harvest index of Coteau.

Space for calculation

1

(ii) Name the cultivar which would be of the greatest value in food production and justify your choice.

Name

Justification

1

(d) Plants can be grown for human food or used as food for livestock.

In terms of food security, explain one benefit of using plants rather than livestock for human food.

14. (a) The map below shows the position of several islands and their distances from the mainland.

Predict the difference in species diversity which would be expected between islands 1 and 2 and give two reasons to justify your answer.

Difference

Reason 1

Reason 2

(b) Habitat islands of native forest are present in large areas of farmland in the UK. They are often connected together by the hedgerows which separate the individual fields as shown in the diagram.

Compared with habitat island A, habitat island B has a greater species diversity. Using information from the map, explain how this has arisen.
15. In an investigation, the behaviour of a group of pigs in an enclosure was observed. Each pig’s behaviour was observed initially and then every ten seconds for twenty minutes. The behaviours observed were allocated to different categories and the results shown in the pie chart below.

(a) Calculate how long the pigs spent feeding.

Space for calculation

………………… minutes 1

(b) Express as the simplest whole number ratio the proportion of time spent walking, lying down and feeding.

Space for calculation

……….. walking: …………. lying down: …………. feeding 1

(c) Suggest one improvement which could be made to this investigation to improve the reliability of the results.

………………………………………………………………………………………………………………………………………………… 1

(d) Give one example of a type of behaviour which could indicate poor welfare of the pigs.

………………………………………………………………………………………………………………………………………………… 1

[Turn over for Section C on Page thirty-four]
SECTION C

Both questions in this section should be attempted.

Note that each section contains a choice.

Questions 1 and 2 should be attempted on the blank pages, which follow.
Supplementary sheets, if required, may be obtained from the Invigilator.
Labelled diagrams may be used where appropriate.

1. Answer either A or B.

A. Write notes on photosynthesis under the following headings:
   (i) energy capture and photosynthetic pigments;  4
   (ii) use of captured energy and the light dependent stage.  6

OR

B. Write notes on social behaviour under the following headings:
   (i) altruism and kin selection;  5
   (ii) primate behaviour.  5

In question 2, ONE mark is available for coherence and ONE mark is available for relevance.

2. Answer either A or B.

A. Give an account of glycolysis and the citric acid cycle in cells.  (10)

OR

B. Give an account of enzyme action and enzyme inhibition.  (10)

[END OF QUESTION PAPER]
