
Overview

This unit covers the competences required for applying failure modes and effects analysis (FMEA). It involves applying the principles and processes of FMEA and determining the key features of FMEA required for the activity under investigation. The activities will include concepts, designs, systems, products, processes and machines.

You will be required to determine the key features of FMEA, co-ordinating and recording the information gathered in an appropriate format, and to make valid judgements about the activity, using FMEA principles. This will include calculating risk priority numbers (RPNs), identifying high RPNs and developing actions to improve them. Once actions have been completed, you will need to reassess the activity and re-score severity, occurrence and detection.

Your responsibilities will require you to comply with organisational policy and procedures for the activities undertaken, and to report any problems with the activities that you can not solve, or that are outside your responsibility, to the relevant authority. You will need to ensure that all the necessary documentation is completed accurately and legibly. You will be expected to take full responsibility for your own actions within the activity, and for the quality and accuracy of the work that you produce.

Your underpinning knowledge will provide a good understanding of FMEA, and will provide an informed approach to the techniques and procedures used. You will need to understand the principles and application of FMEA, in adequate depth to provide a sound basis for carrying out the activities to the required criteria.

Applying safe working practices will be a key issue throughout.

Performance criteria

You must be able to:

- P1 work safely at all times, complying with health and safety and other relevant regulations and guidelines
- P2 determine the key features of failure modes and effects analysis required for the activity under investigation
- P3 co-ordinate and produce a failure modes and effects analysis
- P4 record the information gathered in an appropriate format
- P5 make valid judgements about the activity using failure modes and effects analysis principles
- P6 calculate risk priority numbers (RPNs), identify high RPNs, and develop actions to improve them
- P7 reassess an FMEA once actions have been completed, and re-score severity, occurrence and detection

Knowledge and understanding

You need to know and understand:

- K1 the health and safety requirements of the area in which you are conducting the failure modes and effects analysis
- K2 the main features and benefits of carrying out a failure modes and effects analysis
- K3 who should be part of a team that constructs and updates a failure modes and effects analysis
- K4 system FMEA, Concept FMEA, Design FMEA and Process FMEA - what they are, and where you should use them
- K5 the meaning of failure mode, failure effect and failure cause
- K6 the rating scale used in failure modes and effects analysis projects, to include the severity rating scale, the occurrence rating scale and the detection rating scale
- K7 how to calculate a risk priority number (RPN)
- K8 how to use the risk priority numbers
- K9 how to apply a structured approach to risk reduction
- K10 when to start a failure modes and effects analysis
- K11 when to update a failure modes and effects analysis
- K12 the roles and responsibilities of individuals within a failure modes and effects analysis team
- K13 the extent of your own authority within the project, and to whom you should report in the event of problems that you cannot resolve

Additional Information

Scope/range related to performance criteria

You must be able to:

1. carry out a failure modes and effects analysis on **two** of the following:
 - 1.1. concept
 - 1.2. product
 - 1.3. design
 - 1.4. process
 - 1.5. system
 - 1.6. machine
2. identify, for the activities analysed above:
 - 2.1. the potential failure modes
 - 2.2. the potential effects from failure modes
 - 2.3. the potential causes of failure modes
3. establish rating tables for **all** of the following:
 - 3.1. occurrence
 - 3.2. severity
 - 3.3. detection
4. identify and score **all** of the following:
 - 4.1. the likely occurrence of a potential failure modes
 - 4.2. the severity of the potential failure modes
 - 4.3. the likelihood of detection of the potential failure modes

SEMBIT3-20 - SQA Unit Code F9HK 04

Applying failure modes and effects analysis (FMEA)

Developed by	SEMTA
Version number	1
Date approved	December 2008
Indicative review date	December 2013
Validity	Current
Status	Original
