## Human Biology: Human Cells (Higher) Unit

**SCQF:** level 6 (6 SCQF credit points)

**Unit code:** H4L8 76

### Unit outline

The general aim of this Unit is to develop skills of scientific inquiry, investigation and analytical thinking, along with knowledge and understanding of human cells. Learners will apply these skills when considering the applications of human cells on our lives. This can be done by using a variety of approaches, including investigation and problem solving.

The Unit covers the key areas of:  
division and differentiation in human cells; structure and replication of DNA; gene expression; genes and proteins in health and disease; human genomics; metabolic pathways; cellular respiration; energy systems in muscle cells.

Learners will research issues, apply scientific skills and communicate information related to their findings, which will develop skills of scientific literacy.

Learners who complete this Unit will be able to:

- 1 Apply skills of scientific inquiry and draw on knowledge and understanding of the key areas of this Unit to carry out an experiment or practical investigation
- 2 Draw on knowledge and understanding of the key areas of this Unit and apply scientific skills

This Unit is a mandatory Unit of the Higher Human Biology Course and is also available as a free-standing Unit. The Unit Specification should be read in conjunction with the *Unit Support Notes*, which provide advice and guidance on delivery, assessment approaches and development of skills for learning, skills for life and skills for work. Exemplification of the standards in this Unit is given in Unit Assessment Support.

Higher  
Unit  
Specification

---

The *Course Assessment Specification* for the Higher Human Biology Course gives further mandatory information on Course coverage for learners taking this Unit as part of the Higher Human Biology Course.

## **Recommended entry**

Entry to this Unit is at the discretion of the centre. However, learners would normally be expected to have attained the skills, knowledge and understanding required by one or more of the following or equivalent qualifications and/or experience:

- ◆ National 5 Biology Course or relevant component Units

## **Equality and inclusion**

This Unit Specification has been designed to ensure that there are no unnecessary barriers to learning or assessment. The individual needs of learners should be taken into account when planning learning experiences, selecting assessment methods or considering alternative evidence. For further information, please refer to the *Unit Support Notes*.

# Standards

## Outcomes and assessment standards

### Outcome 1

The learner will:

**1 Apply skills of scientific inquiry and draw on knowledge and understanding of the key areas of this Unit to carry out an experiment or practical investigation by:**

- 1.1 Planning an experiment or practical investigation
- 1.2 Following procedures safely
- 1.3 Making and recording observations/measurements correctly
- 1.4 Presenting results in an appropriate format
- 1.5 Drawing valid conclusions
- 1.6 Evaluating experimental procedures

### Outcome 2

The learner will:

**2 Draw on knowledge and understanding of the key areas of this Unit and apply scientific skills by:**

- 2.1 Making accurate statements
- 2.2 Solving problems

## Evidence Requirements for the Unit

Assessors should use their professional judgement, subject knowledge and experience, and understanding of their learners, to determine the most appropriate ways to generate evidence and the conditions and contexts in which they are used.

Evidence can be drawn from a variety of sources and presented in a variety of formats.

Evidence may be presented for individual Outcomes or gathered for the Unit as a whole, by combining assessment holistically in a single activity. If the latter approach is used, it must be clear how the evidence covers each Outcome.

The key areas covered in this Unit are:  
division and differentiation in human cells; structure and replication of DNA; gene expression; genes and proteins in health and disease; human genomics; metabolic pathways; cellular respiration; energy systems in muscle cells.

The table below describes the evidence for the Assessment Standards which require exemplification.

Assessment Standard	Evidence required
Planning an experiment	The plan should include:

	<ul style="list-style-type: none"> <li>◆ a clear statement of the aim</li> <li>◆ a hypothesis</li> <li>◆ a dependent and independent variable</li> <li>◆ variables to be kept constant</li> <li>◆ measurements/observations to be made</li> <li>◆ the equipment/materials</li> <li>◆ a clear and detailed description of how the experiment/practical investigation should be carried out, including safety considerations</li> </ul>
Presenting results in an appropriate format	One format from: table, line graph, chart, key, diagram, flow chart, summary, extended text or other appropriate format
Drawing a valid conclusion	Include reference to the aim
Evaluating experimental procedures	Suggest two improvements with justification
Making accurate statements	At least half of the statements should be correct across the key areas of this Unit
Solving problems	One from each: <ul style="list-style-type: none"> <li>◆ make generalisation/prediction</li> <li>◆ select information</li> <li>◆ process information, including calculations, as appropriate</li> <li>◆ analyse information</li> </ul>

**Transfer of Evidence:**

Evidence for the achievement of Outcome 1 and Assessment Standard 2.2 for this Unit can be used as evidence of the achievement of Outcome 1 and Assessment Standard 2.2 in the other Units of this Course.

Exemplification of assessment is provided in Unit assessment support packs. Advice and guidance on possible approaches to assessment is provided in the *Unit Support Notes*.

# Development of skills for learning, skills for life and skills for work

It is expected that learners will develop broad, generic skills through this Unit. The skills that learners will be expected to improve on and develop through the Unit are based on SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work* and drawn from the main skills areas listed below. These must be built into the Unit where there are appropriate opportunities.

## 1 Literacy

1.2 Writing

## 2 Numeracy

2.1 Number processes

2.2 Money, time and measurement

2.3 Information handling

## 5 Thinking skills

5.3 Applying

5.4 Analysing and evaluating

5.5 Creating

Amplification of these is given in SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work*. The level of these skills should be at the same SCQF level of the Unit and be consistent with the SCQF level descriptor. Further information on building in skills for learning, skills for life and skills for work is given in the *Unit Support Notes*.

# Administrative information

---

**Published:** June 2014 (version 3.0)

**Superclass:** RH

---

## History of changes to National Unit Specification

Version	Description of change	Authorised by	Date
2.0	Page 1 – the description of key areas under ‘Unit outline’ has been revised to give more information  Page 4 – in Outcome 1.3, the word ‘accurately’ has been replaced by ‘correctly’.  Page 5– the Evidence requirements have been rewritten to better explain what is required  Page 5 – information has been added on Transfer of Evidence	Qualifications Development Manager	April 2014
3.0	Assessment Standards 2.2 and 2.3 removed	Qualifications Development Manager	June 2014

This specification may be reproduced in whole or in part for educational purposes provided that no profit is derived from reproduction and that, if reproduced in part, the source is acknowledged. Additional copies of this Unit can be downloaded from SQA’s website at [www.sqa.org.uk](http://www.sqa.org.uk).

Note: readers are advised to check SQA’s website: [www.sqa.org.uk](http://www.sqa.org.uk) to ensure they are using the most up-to-date version of the Unit Specification.
