

## SCQF level 5 Unit Specification

---

### **Environmental Science: Living Environment**

**SCQF:** level 5 (6 SCQF credit points)

**Unit code:** H24P 75

#### **Unit outline**

The general aim of this Unit is to develop skills of scientific inquiry, investigation and analytical thinking, along with knowledge and understanding of the living environment. Learners will apply these skills when considering the applications of the living environment on our lives, as well as the implications on society/the environment. This can be done by using a variety of approaches, including investigation and problem solving.

The Unit covers the key areas of investigating ecosystems and biodiversity, interdependence and human influences on biodiversity. Learners will research issues, apply scientific skills and communicate information related to their findings, which will develop skills of scientific literacy.

Learners who complete this Unit will be able to:

1. Apply skills of scientific inquiry and draw on knowledge and understanding of the key areas of this Unit to carry out an experiment/practical investigation
2. Draw on knowledge and understanding of the key areas of this Unit and apply scientific skills

This Unit is available as a free-standing Unit. The Unit Specification should be read in conjunction with the *Unit Support Notes*, which provide advice and guidance on delivery, assessment approaches and development of skills for learning, skills for life and skills for work. Exemplification of the standards in this Unit is given in *Unit Assessment Support*.

## **Recommended entry**

Entry to this Unit is at the discretion of the centre. However, learners would normally be expected to have attained the skills, knowledge and understanding required by one or more of the following or equivalent qualifications and/or experience:

- ◆ National 4 Environmental Science Course or relevant component Units
- ◆ National 4 Geography Course or relevant component Units
- ◆ National 4 Science Course or relevant component Units

## **Equality and inclusion**

This Unit Specification has been designed to ensure that there are no unnecessary barriers to learning or assessment. The individual needs of learners should be taken into account when planning learning experiences, selecting assessment methods or considering alternative evidence. For further information, please refer to the *Unit Support Notes*.

# Standards

## Outcomes and Assessment Standards

### Outcome 1

The learner will:

- 1 Apply skills of scientific inquiry and draw on knowledge and understanding of the key areas of this Unit to carry out an experiment/practical investigation by:**
  - 1.1 Planning an experiment/practical investigation
  - 1.2 Following procedures safely
  - 1.3 Making and recording observations/measurements correctly
  - 1.4 Presenting results in an appropriate format
  - 1.5 Drawing valid conclusions
  - 1.6 Evaluating experimental procedures

### Outcome 2

The learner will:

- 2 Draw on knowledge and understanding of the key areas of this Unit and apply scientific skills by:**
  - 2.1 Making accurate statements
  - 2.2 Solving problems

# Evidence Requirements for the Unit

Assessors should use their professional judgement, subject knowledge and experience, and understanding of their learners, to determine the most appropriate ways to generate evidence and the conditions and contexts in which they are used.

The key areas covered in this Unit are: investigating ecosystems and biodiversity, interdependence and human influences on biodiversity.

## Living Environment

### 1 Investigating ecosystems and biodiversity

- a. Ecological terms, to include habitat, community, biotic, abiotic, biodiversity, species, population, adaptation and competition
- b. Biodiversity in the context of one aquatic and one terrestrial ecosystem of national importance
- c. Quantitative techniques for sampling plants and animals, to include quadrats and pitfall traps
- d. The limitations of quantitative techniques and potential sources of error
- e. Techniques to measure abiotic factors, to include light intensity, temperature, pH and soil moisture
- f. The effect of abiotic factors on the distribution of organisms
- g. Identification of organisms, to include construction and use of paired-statement keys

### 2 Interdependence

- a. Food webs, to include carnivore, herbivore, omnivore, producer, primary/secondary/tertiary consumer, detritivore, decomposer and niche
- b. Factors affecting food webs including predation, disease, competition, natural and human impacts
- c. Energy flow through food webs and energy loss through movement, heat and undigested material
- d. Simple word equations of photosynthesis and respiration and the interdependence between plants and animals
- e. Processes involved in the nitrogen cycle, to include nitrogen fixation, death/decay, decomposers to include fungi and bacteria, nitrification and denitrification by bacteria, absorption of nitrates by plants, feeding by animals
- f. Processes involved in the biological carbon cycle, to include photosynthesis, respiration, feeding, decomposition, formation and combustion of fossil fuels

### 3 Human influences on biodiversity

- a. Human activities which have a positive or negative effect on ecosystems, with a focus on species reduction or increase, extinction and loss of biodiversity
- b. The role of indicator species in environmental monitoring
- c. The impact of non-native species (any species introduced intentionally or accidentally into a new community by human activity) on ecosystems. To include one named example
- d. Conflicts between land and/or water based activities and an environment of national importance
- e. Relevant current national organisations to include the role of SEPA as environmental regulator, the role of SNH as environmental educator and advisor, policies and legislation for the protection of the environment, to include the Wildlife and Countryside Act. The designation of Sites of Special Scientific Interest (SSSIs) under the Nature Conservation (Scotland) Act 2004 as a nature conservation tool

Evidence can be drawn from a variety of sources and presented in a variety of formats. The table below describes the evidence for the Assessment Standards which require exemplification. Evidence may be presented for individual Outcomes or gathered for the Unit as a whole, through combining assessment holistically in a single activity. If the latter approach is used, it must be clear how the evidence covers each Outcome.

Assessment Standard	Evidence required
Planning an experiment	The plan should include: <ul style="list-style-type: none"> <li>◆ an aim</li> <li>◆ a dependent and independent variable</li> <li>◆ key variables to be kept constant</li> <li>◆ measurements/observations to be made</li> <li>◆ the resources</li> <li>◆ the method including safety considerations</li> </ul>
Presenting results in an appropriate format	One format from: table, line graph, chart, key, diagram, flow chart, summary or other appropriate format.
Drawing a valid conclusion	Include reference to the aim.
Evaluating experimental procedures	Suggest an improvement with justification.
Making accurate statements	At least half of the statements should be correct across the key areas of this Unit.
Solving problems	One of each: <ul style="list-style-type: none"> <li>◆ make generalisation/prediction</li> <li>◆ select information</li> <li>◆ process information, including calculations, as appropriate</li> <li>◆ analyse information</li> </ul>
Outcome 2: making accurate statements and solving problems may be combined into one holistic assessment, with marks allocated to each question. In this case, to achieve Outcome 2 the candidate must achieve at least 50% of the marks available in the set of questions.	

Outcome 1: Candidates must achieve at least five out of the six Assessment Standards to achieve a pass.

### Transfer of Evidence

Evidence for the achievement of Outcome 1 for this Unit can be used as evidence for the achievement of Outcome 1 in the Units H24R 75 *Environmental Science: Earths Resources* and H24S 75 *Environmental Science: Sustainability*.

Where Assessment Standard 2.2 is being assessed separately from Assessment Standard 2.1, evidence of achievement of Assessment Standard 2.2 for this Unit can be used as evidence of achievement of Assessment Standard 2.2 in the Units H24R 75 *Environmental Science: Earths Resources* and H24S 75 *Environmental Science: Sustainability*.

**Note:** this does not apply when Outcome 2 is being assessed holistically.

As Assessment Standard 2.1 (Making accurate statements) relates specifically to the key areas of each Unit, evidence is **not transferable** between the Units for this Assessment Standard.

Exemplification of assessment is provided in *Unit Assessment Support*. Advice and guidance on possible approaches to assessment is provided in the *Unit Support Notes*.

# Development of skills for learning, skills for life and skills for work

It is expected that learners will develop broad, generic skills through this Unit. The skills that learners will be expected to improve on and develop through the Unit are based on SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work* and drawn from the main skills areas listed below. These must be built into the Unit where there are appropriate opportunities.

## **2 Numeracy**

- 2.1 Number processes
- 2.2 Money, time and measurement
- 2.3 Information handling

## **4 Employability, enterprise and citizenship**

- 4.6 Citizenship

## **5 Thinking skills**

- 5.3 Applying
- 5.4 Analysing and evaluating

Amplification of these is given in SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work*. The level of these skills should be at the same SCQF level of the Unit and be consistent with the SCQF level descriptor. Further information on building in skills for learning, skills for life and skills for work is given in the *Unit Support Notes*.
