

National Unit Specification: general information

UNIT Returning Plant and Equipment to Service by Repair and Overhaul:
An Introduction (SCQF level 6)

CODE F8T8 12

SUMMARY

This Unit provides candidates an introduction to repairing and overhauling plant or equipment used in construction and allied industries, plant hire and tool hire industries. It will develop the candidate's understanding of how to identify and determine the repairs that are required and whether these are feasible. On completion of this Unit, candidates will be able to achieve repairs in accordance with given specifications, reassemble and reinstate plant or equipment to operation. This Unit is suitable for candidates working towards a Modern Apprenticeship in the Construction Craft Occupations suite.

OUTCOMES

- 1 Establish requirements for repair and overhaul in accordance with the specification.
- 2 Assess the condition of components for re-use.
- 3 Conduct repair and overhaul and plant and equipment.

RECOMMENDED ENTRY

Entry is at the discretion of the centre.

CREDIT VALUE

2 credits at SCQF level 6 (12 SCQF credits at level 6*).

**SCQF credit points are used to allocate credit to qualifications in the Scottish Credit and Qualifications Framework (SCQF). Each qualification in the Framework is allocated a number of SCQF credit points at an SCQF level. There are 12 SCQF levels, ranging from Access 1 to Doctorates.*

National Unit Specification: general information (cont)

UNIT Returning Plant and Equipment to Service by Repair and Overhaul:
An Introduction (SCQF level 6)

CORE SKILLS

Opportunities to develop aspects of Core Skills are highlighted in the Support Notes of this Unit Specification.

There is no automatic certification of Core Skills or Core Skill components in this Unit.

National Unit Specification: statement of standards

UNIT Returning Plant and Equipment to Service by Repair and Overhaul: An Introduction (SCQF level 6)

Acceptable performance in this Unit will be the satisfactory achievement of the standards set out in this part of the Unit Specification. All sections of the statement of standards are mandatory and cannot be altered without reference to SQA.

OUTCOME 1

Establish requirements for repair and overhaul in accordance with the specification.

Performance Criteria

- (a) Interpret accurately the specification for the work.
- (b) Identify and interpret the appropriate technical manuals and guides for the work.
- (c) Select the appropriate tools and equipment for the task.
- (d) Select appropriate personal protective equipment (PPE) for the specified task, in accordance with organisational requirements.

OUTCOME 2

Assess the condition of components for re-use.

Performance Criteria

- (a) Clean components for inspection and examination.
- (b) Dismantle plant or equipment according to manufacturer's instructions.
- (c) Where appropriate, drain fluids and/or coolants from plant or equipment.
- (d) Using appropriate techniques, assess the extent of damage and/or defects to plant or equipment.
- (e) Maintain accurate records of the assessment.
- (f) Follow organisational and manufacturer's procedures to determine the feasibility of conducting repairs to plant or equipment.
- (g) Assess the availability of components and parts of replacement units.

OUTCOME 3

Conduct repair and overhaul of plant and equipment.

Performance Criteria

- (a) Conduct necessary repairs according to initial assessment and manufacturer's technical information.
- (b) Reassemble repaired components according to records and manufacturer's instructions.
- (c) Conduct necessary adjustments to assembled and repaired components to ensure plant or equipment meets specified operating conditions.
- (d) Complete maintenance activities in the specified sequence and timescale.
- (e) Dispose of waste in accordance with legislative requirements.
- (f) Complete all records accurately.

National Unit Specification: statement of standards (cont)

UNIT Returning Plant and Equipment to Service by Repair and Overhaul:
 An Introduction (SCQF level 6)

EVIDENCE REQUIREMENTS

Candidates are required to produce evidence to confirm that they have achieved all Outcomes and Performance Criteria outlined in this Unit.

Performance evidence is required to demonstrate the candidate has achieved the standard specified in the Outcomes and Performance Criteria for Outcomes. Performance evidence must be supplemented with an assessor observation/operational checklist and produced at an appropriate interval in training, under supervised conditions, once the candidate has developed the necessary skills and knowledge required to carry out the work.

Performance evidence could include the following types of repair and overhaul techniques:

- ◆ cleaning and preparing
- ◆ reshaping by grinding, filing
- ◆ application of heat
- ◆ cutting
- ◆ reaming and bushing
- ◆ reclamation
- ◆ measuring for compliance

As part of the assessment for this Unit, the candidate will also submit written product evidence such as a works checklist or completed risk assessment form. Oral evidence of knowledge and understanding may be demonstrated by the candidate during practical assignments set for all Outcomes and noted at the time by the observer.

National Unit Specification: support notes

UNIT Returning Plant and Equipment to Service by Repair and Overhaul: An Introduction (SCQF level 6)

This part of the Unit Specification is offered as guidance. The support notes are not mandatory.

While the exact time length allocated to this Unit is at the discretion of the centre, the notional design length is 80 guided learning hours.

GUIDANCE ON THE CONTENT AND CONTEXT FOR THIS UNIT

The Outcomes and Performance Criteria for this Unit can be demonstrated by the candidate demonstrating the following types of repair and overhaul techniques:

- ◆ cleaning and preparing
- ◆ reshaping by grinding, filing
- ◆ application of heat
- ◆ cutting
- ◆ reaming and bushing
- ◆ reclamation
- ◆ measuring for compliance

The content and context of *Returning Plant and Equipment to Service by Repair and Overhaul: An Introduction* has been set at an introductory level so that the candidate can develop a basic knowledge and ability in returning plant and equipment to service by repair and overhaul within a construction environment.

Health and Safety are vital to working practices within the construction industry and therefore, emphasis will be placed wherever appropriate during the delivery of this Unit on the correct application of Health and Safety principles and processes, in accordance with current codes of practice and legislation.

GUIDANCE ON LEARNING AND TEACHING APPROACHES FOR THIS UNIT

These notes are for guidance purposes only, and are not to be considered as a complete training package for centres to follow.

Opportunities for integrated delivery of this Unit may be possible with all mandatory Units.

The introductory training for this Unit should take place in a separate training area independent of the productive work environment and using dedicated equipment and resources. This should cover theoretical and practical principles before any practical application of knowledge is carried out by candidates.

National Unit Specification: support notes (cont)

UNIT Returning Plant and Equipment to Service by Repair and Overhaul: An Introduction (SCQF level 6)

Delivery of this Unit will be focussed on enabling candidates to develop the knowledge required to returning plant and equipment to service by repair and overhaul safely before they are given the opportunity to do so within the workplace environment. Candidates should learn and be encouraged to communicate the theories and principles behind good repairing techniques. Delivery of this Unit should also ensure candidates learn about different materials, are able to use correct terminology and understand the correct tools, equipment and materials to be used for specified systems, before any practical work takes place. Emphasis will also be placed on the importance of candidates accurately understanding and interpreting the information provided within work specifications and drawings.

During delivery of the practical components of this Unit, candidates should understand the importance of ensuring good visibility at all times when operating tools and machinery. Candidates should also know to adhere to relevant Health and Safety regulations and legislation relating both to working practices within the construction environment, as well as those specific to any practical task they are requested to carry out (such as emphasising the importance of selecting and using the correct PPE at all times).

E-learning approaches may be appropriate to help tailor delivery to suit the individual needs or learning styles of candidates. This might include, for example, encouraging learners to use electronic resources to conduct research into a specific knowledge area.

OPPORTUNITIES FOR CORE SKILL DEVELOPMENT

Candidates will be need to apply the Core Skill of *Numeracy* (SCQF level 4) when interpreting the measurements and other information provided in the work drawings and specification (Outcomes 1 and 2). The interpretation of work specifications and drawings will also require candidates to think critically, plan and organise the task accordingly — key aspects of the Core Skill of *Problem Solving* (SCQF level 4).

The opportunity for the Core Skill *Working with Others* (SCQF level 4) will be provided as candidates ensure the safety of others as they comply with codes of practice and working regulations (all Outcomes). Throughout this Unit, candidates will be expected to develop the Core Skill of *Communication* (SCQF level 4) within the work environment, for example to inform others of any safety considerations, using the correct terminology and a tone appropriate to the workplace environment. In addition, assessment processes may enable candidates the opportunity to develop their Written Communication skills.

National Unit Specification: support notes (cont)

UNIT Returning Plant and Equipment to Service by Repair and Overhaul: An Introduction (SCQF level 6)

GUIDANCE ON APPROACHES TO ASSESSMENT FOR THIS UNIT

Centres may use the Instruments of Assessment they consider to be most appropriate, and the following notes are given as guidance only.

Opportunities for integrated assessment of this Unit may be possible with all mandatory Units.

Underpinning knowledge of returning plant and equipment to service by repair and overhaul should be assessed before any practical assignments are carried out by candidates. This will include assessment of a candidate's ability to select the correct equipment and techniques for a specified task. Assessment of practical performance should take place under supervised conditions and confirm a candidate's ability to confirm the occupational work method using the correct techniques and accessories, whilst adhering to Health and Safety regulations and legislation.

For Outcomes 1 and 2, candidates may be assessed by centres setting a series of technical or theoretical questions designed to ensure candidates have developed the required standard of knowledge for this Unit. Any oral responses given by candidates will be recorded by an observer at the time of assessment — this may be an appropriate method when the candidate carries out any practical assignments.

Outcomes 2 and 3 may be assessed by centres setting candidates a series of appropriate practical assignments carried out under supervised conditions and recorded in an assessor's observation/operational checklist. Practical assignments undertaken by a candidate will be assessed according to their ability to carry out the task safely, using appropriate machinery according to manufacturer's guidelines.

Adherence to appropriate working regulations and Health and Safety procedures will be observed during the practical exercise carried out by the candidates towards all Outcomes.

Opportunities for the use of e-assessment

E-assessment may be appropriate for some assessments in this Unit. By e-assessment we mean assessment which is supported by Information and Communication Technology (ICT), such as e-testing or the use of e-portfolios or e-checklists. Centres which wish to use e-assessment must ensure that the national standard is applied to all candidate evidence and that conditions of assessment as specified in the Evidence Requirements are met, regardless of the mode of gathering evidence. Further advice is available in *SQA Guidelines on Online Assessment for Further Education (AA1641, March 2003)*, *SQA Guidelines on e-assessment for Schools (BD2625, June 2005)*.

DISABLED CANDIDATES AND/OR THOSE WITH ADDITIONAL SUPPORT NEEDS

The additional support needs of individual candidates should be taken into account when planning learning experiences, selecting assessment instruments, or considering whether any reasonable adjustments may be required. Further advice can be found on our website www.sqa.org.uk/assessmentarrangements
