Higher Human Biology

Assignment

Assessment task

This document provides information for teachers and lecturers about the coursework component of this course in terms of the skills, knowledge and understanding that are assessed. It must be read in conjunction with the course specification.

Valid from session 2019-20 and until further notice.

The information in this publication may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.

Instructions for candidates 19
Introduction

This document contains instructions for teachers and lecturers, marking instructions and instructions for candidates for the Higher Human Biology assignment. You must read it in conjunction with the course specification.

This assignment is worth 20 marks (scaled to 30). This is 20% of the overall marks for the course assessment.

This is one of three course assessment components. The other components are question papers.
Instructions for teachers and lecturers

General information

This information applies to the assignment for Higher Human Biology.

The assignment assesses the application of skills of scientific inquiry and related biology knowledge and understanding.

The assignment gives candidates an opportunity to demonstrate the following skills, knowledge and understanding:

- applying knowledge of human biology to new situations, interpreting information and solving problems
- planning, designing and safely carrying out experiments/practical investigations to test given hypotheses or to illustrate particular effects
- selecting information from a variety of sources
- presenting information appropriately in a variety of forms
- processing information (using calculations and units, where appropriate)
- making predictions and generalisations based on evidence/information
- drawing valid conclusions and giving explanations supported by evidence/justification
- evaluating experiments/practical investigations and suggesting improvements
- communicating findings/information effectively

The assignment offers challenge by requiring candidates to apply skills, knowledge and understanding in a context that is one or more of the following:

- unfamiliar
- familiar but investigated in greater depth
- integrating a number of familiar contexts

Candidates research and report on a topic that allows them to apply skills and knowledge in biology at a level appropriate to Higher.

The topic must be chosen with guidance from teachers and/or lecturers and must involve experimental work.

The assignment has two stages:

- research
- report

The research stage must involve experimental work that allows measurements to be made. Candidates must also gather data/information from the internet, books and/or journals.

Candidates must produce a report of their research.
Conditions of assessment
Setting, conducting and marking the assignment

Setting
The assignment is:

- set by centres within SQA guidelines
- set at a time appropriate to the candidate’s needs
- set within teaching and learning and includes experimental work at a level appropriate to Higher

Conducting
The assignment is:

- an individually produced piece of work from each candidate
- started at an appropriate point in the course
- conducted under controlled conditions

Marking
The report is submitted to SQA for external marking.

All marking is quality assured by SQA.

Assessment conditions
Controlled assessment is designed to:

- ensure that all candidates spend approximately the same amount of time on their assignments
- prevent third parties from providing inappropriate levels of guidance and input
- mitigate concerns about plagiarism and improve the reliability and validity of SQA awards
- allow centres a reasonable degree of freedom and control
- allow candidates to produce an original piece of work
There are two levels of control.

<table>
<thead>
<tr>
<th>Under a high degree of supervision and control</th>
<th>Under some supervision and control</th>
</tr>
</thead>
<tbody>
<tr>
<td>♦ the use of resources is tightly prescribed</td>
<td>♦ candidates do not need to be directly supervised at all times</td>
</tr>
<tr>
<td>♦ all candidates are within direct sight of the supervisor throughout the session(s)</td>
<td>♦ the use of resources, including the internet, is not tightly prescribed</td>
</tr>
<tr>
<td>♦ display materials which might provide assistance are removed or covered</td>
<td>♦ the work an individual candidate submits for assessment is their own</td>
</tr>
<tr>
<td>♦ there is no access to e-mail, the internet or mobile phones</td>
<td>♦ teachers and/or lecturers can provide reasonable assistance</td>
</tr>
<tr>
<td>♦ candidates complete their work independently</td>
<td></td>
</tr>
<tr>
<td>♦ interaction with other candidates does not occur</td>
<td></td>
</tr>
<tr>
<td>♦ no assistance of any description is provided</td>
<td></td>
</tr>
</tbody>
</table>

The assignment has two stages.

</table>
**Instructions**

Teachers and/or lecturers must exercise their professional responsibility to ensure that the report submitted is the candidate’s own work.

It is recommended that no more than 8 hours is spent on the whole assignment.

A maximum of 2 hours is allowed for the report stage.

Teachers and/or lecturers must ensure candidates understand the requirements of the task. The instructions for candidates outline the requirements for the assignment and teachers and/or lecturers must give these to candidates at the outset. These must not be altered or supplemented with centre-devised material.

Teachers and/or lecturers must not, at any stage, provide candidates with a template or model answers.

**Research stage**

The research stage is conducted under some supervision and control. See ‘Conditions of assessment’ section.

**Choosing the topic**

The teacher and/or lecturer must ensure that a range of topics is available for candidates to choose from.

At the start of the research stage, the teacher and/or lecturer must agree the choice of topic with the candidate to ensure that it:

- is appropriate for Higher Human Biology
- has associated experimental work that can generate numerical data
- allows the candidate the opportunity to access all of the available marks

Teachers and/or lecturers must minimise the number of candidates investigating the same topic within a class.

A range of topics chosen for investigation will create the climate in which candidates can produce original work within the conditions of assessment.

Once candidates have agreed the topic with their teacher and/or lecturer, they must formulate an aim.
Formulating the aim

To ensure the candidate’s aim is achievable the teacher and/or lecturer must provide advice on its suitability, taking into account:

- health and safety considerations
- availability of resources
- availability of data/information from internet/literature

Teachers and/or lecturers must not provide candidates with an aim.

After the candidate has formulated an aim, they can progress through the research stage.

The candidate's research consists of gathering data relevant to the aim from an experiment and comparative data/information from an internet/literature source.

The candidate's research may also involve gathering extracts from internet/literature source(s) to support their description of the underlying biology.

Candidates can carry out their research in any order. They do not have to follow the order outlined below.

Experimental research

Teachers and/or lecturers can supply instructions for the experimental procedure. This must only be a basic list of instructions. These instructions must not include details of the number and range of values or reference to repeats. Candidates must decide on these for themselves. Where there is a safety issue, a maximum value for the range can be provided.

Teachers and/or lecturers are responsible for ensuring that appropriate risk assessment has been carried out and that candidates have guidance on the safe and correct use of chemicals and equipment.

Teachers and/or lecturers must not provide candidates with experimental data.

Teachers and/or lecturers must not provide candidates with a blank or pre-populated table for experimental results.

Candidates must carry out the experimental work individually or as part of a small group. (A small group is defined as having two, three or four candidates.)

Group work may be an appropriate approach in a number of circumstances, for example:

- to encourage diversity of research topic
- where experimental work is labour- or time-intensive
- where resources are limited

Where candidates work in a group, teachers and/or lecturers must ensure every candidate participates in the experimental work. Within the small group, it is acceptable for
candidates to share experimental data, but experimental data must not be shared between groups.

Teachers and/or lecturers must not provide feedback to candidates on their results. However, where candidates identify a problem with their results and indicate that they wish to repeat the experimental work, they may do so.

**Internet/literature research**

The internet/literature research must be the work of the individual candidate; candidates cannot work in a group to carry out this research.

Candidates may carry out research to find comparative data/information and underlying biology outwith the direct supervision of teachers and/or lecturers.

Candidates must undertake research using only websites, journals and/or books to find secondary data/information.

Candidates must find internet/literature data that they can directly compare to their experimental data and record the reference to the source.

This can be data that:

- matches the sample range used
- is not an exact match for the sample range used
- is generic and illustrates a trend or pattern expected in the experimental data

Where it is not possible to find such data, candidates should aim to find information that may:

- directly support the experimental data
- be in contrast to the experimental data

In circumstances where there is difficulty locating secondary data/information, teachers and/or lecturers may provide candidates with a wide list of URLs and/or a wide range of books and/or journals. (A wide list is specified as a minimum of six.) This list must have a sufficient range of sources to allow candidates to make decisions about which data/information is relevant.

Only where internet access is an issue, teachers and/or lecturers can provide candidates with a printed copy of the full content of all URLs given in the list.

Teachers and lecturers must ensure that the level of demand of the research task is the same for all candidates irrespective of the approach taken.

Teachers and/or lecturers must not provide candidates with feedback on their research.
Report stage

The report stage is conducted under a high degree of supervision and control. See ‘Conditions of assessment’ section.

Candidates must be given a maximum of 2 hours to produce the report.

- This can be a continuous period of time or split over a number of successive subject lessons.
- Centres are responsible for ensuring that candidates are given no more than the maximum time.
- If candidates produce the report over a number of lessons, then the teacher and/or lecturer must retain and store candidates’ work securely between lessons.

Candidates may word-process their reports and use appropriate software to produce graphs – providing that the assessment conditions are met.

Teachers and/or lecturers must check that all materials (in any format) that each and every candidate will use in the report stage fit the following criteria.

The only materials that can be used in the report stage are:

- the instructions for candidates, which must not have been altered
- the candidate’s raw experimental data, which may be tabulated, however must not have additional blank or pre-populated columns for mean and derived values
- data/information taken from the internet or literature, which must not include sample calculations
- a record of the source(s) of internet or literature data/information
- the experimental method, if appropriate
- extract(s) from internet/literature source(s) to support the underlying biology, which must not include sample calculations

An extract must be:

- chosen by the candidate — they must select what information to extract
- verbatim — it must be a direct copy, which can be a printout, photocopy or handwritten (and word for word)
- from an internet/literature source — not from centre-devised course material or class notes. Candidate notes of any description are not permitted
- checked by the teacher or lecturer to ensure that it is an extract (unannotated), and not notes or a draft

There is no size limit on an extract; however, it must be an extract and not the full document.

Candidates must not have access to a previously prepared draft of a report or any part of a report.
In addition, candidates must not have access to the assignment marking instructions during the report stage.

Candidates must not have access to the internet during the report stage.

Teachers and/or lecturers must not provide any form of feedback to a candidate on their report.

Following completion of the report stage candidates must not be given an opportunity to redraft their report.

Teachers and/or lecturers must not read the reports before they are submitted to SQA.

**Evidence to be gathered**

The following candidate evidence is required for this assessment:

- a report

The report is submitted to SQA, within a given time frame, for marking.

The same report cannot be submitted for more than one subject.
Marking instructions

In line with SQA’s normal practice, the following marking instructions for the Higher Human Biology assignment are addressed to the marker. They will also be helpful for those preparing candidates for course assessment.

Candidates’ evidence is submitted to SQA for external marking.

General marking principles

Always apply these general principles. Use them in conjunction with the detailed marking instructions, which identify the key features required in candidates’ responses.

Always use positive marking. This means candidates accumulate marks for the demonstration of relevant skills, knowledge and understanding; marks are not deducted for errors or omissions.
### Detailed marking instructions

Read the whole report before assigning any marks.

</thead>
<tbody>
<tr>
<td>3</td>
<td>5</td>
<td>Data collection and handling (5 marks)</td>
</tr>
</tbody>
</table>
| 3 a     | 1        | A brief summary of the approach used to collect experimental data.  
Where the candidate has not demonstrated the ability to summarise the method, do not award the mark.  
The summary need only be in sufficient detail that the nature of the experiment can be visualised. The candidate must name any chemical(s) used and the equipment used to measure the dependent variable.  
The candidate should not include excessive details in the summary.  
A diagram on its own is insufficient to gain this mark.  
Acceptable summaries of practical work could be:  
◆ ‘Six beakers were set up with different concentrations of hydrogen peroxide. Filter paper discs were soaked in catalase solution. One disc was dropped to the bottom of the first beaker and a stop clock used to time how long it took to rise to the surface. This was repeated for each concentration.’  
◆ ‘Five woodlice were placed in a sealed flask that was fitted with a carbon dioxide probe. The flask was placed in a water bath at 5°C and left for 10 minutes. Then the probe was used to record the CO₂. This was repeated at four other temperatures.’ |
<table>
<thead>
<tr>
<th>Section</th>
<th>Max mark</th>
<th>Expected response and marking instructions</th>
</tr>
</thead>
</table>
| 3 b     | 1        | **Sufficient raw data from the candidate's experiment.**  
Repeated measurements must be included.  
The number and range of values must be appropriate to the aim. A minimum of three values will be appropriate in some investigations; however, the number will depend upon the aim of the investigation.  
For example:  
♦ In an experiment to investigate the effect of end product inhibition of phosphatase, five different phosphate concentrations would be appropriate over the range of molarities: 0, 0·05M, 0·10M, 0·20M, 0·30M.  
♦ In an experiment to investigate how using different respiratory substrates affects dehydrogenase activity in yeast, three substrates would be sufficient, for example glucose, maltose and lactose.  
In this section, do not penalise errors in presentation of the data, such as missing headings or missing units from tables.  
Award this mark for raw, unprocessed data and not the mean/average values calculated from raw data. |
| 3 c     | 1        | **Data, including mean/average values, presented in a correctly produced table(s).**  
Experimental data must be tabulated.  
Every column must have a clear heading.  
Units must be indicated in column headings or given after every data entry.  
All mean/average values must be calculated correctly and tabulated. |

Instructions for candidates

This assessment applies to the assignment for Higher Human Biology.

This assignment is worth 20 marks. This is 20% of the overall marks for the course assessment.

It assesses the following skills, knowledge and understanding:

- applying knowledge of human biology to new situations, interpreting information and solving problems
- planning, designing and safely carrying out experiments/practical investigations to test given hypotheses or to illustrate particular effects
- selecting information from a variety of sources
- presenting information appropriately in a variety of forms
- processing information (using calculations and units, where appropriate)
- making predictions and generalisations based on evidence/information
- drawing valid conclusions and giving explanations supported by evidence/justification
- evaluating experiments/practical investigations and suggesting improvements
- communicating findings/information effectively

Your assignment has two stages:

- research
- report

Your teacher or lecturer will let you know if there are any specific conditions for doing this assessment, and tell you how the assignment will be carried out.

In this assignment you have to investigate a topic in human biology by doing research.

Your research involves gathering data from an experiment and data/information from internet/literature source(s).

You then produce a report on your investigation.

Your teacher or lecturer will not mark your report at any point. It is sent to SQA for marking.
Research stage
Choosing your topic
- You need to choose a relevant topic in human biology to investigate.
- You must agree your topic with your teacher or lecturer.

Deciding your aim
- Once you have chosen your topic, you need to decide on the aim of your investigation. Remember that you need to do an experiment and find data/information to compare with your experimental results.
- Your teacher or lecturer will provide advice on the suitability of your aim, in terms of safety and availability of resources. They will not assess your aim.

Experimental research
- When choosing your experiment, remember it must allow measurements to be taken.
- When carrying out your experiment, you must work either on your own or as part of a small group. If you are working as part of a small group, you must take an active part.
- Make sure you use a sufficient number of values over a wide enough range to meet the aim of your investigation.
- You must have repeat measurements.
- Your raw experimental data may be tabulated; however, tables must not have additional blank or pre-populated columns for mean and derived values.
- You will use your raw experimental data during the report stage.

Internet/literature research
You must carry out your own internet/literature research.
- You need to find data/information from the internet, books and/or journals that you can compare to your experimental data. This could be a table or a graph, or information such as a diagram or text, which is relevant to your aim. This data/information does not need to exactly match your experiment but could illustrate the trend or pattern expected in your experiment.
- It is important that you record where you get your data/information from in enough detail that another person could find it. This is known as a reference.
- In your report, you will need to describe the biology relevant to your aim. You can gather extracts from the internet, books and/or journals to help you write your description of the underlying biology. An extract must be from an internet/literature source — not from centre-devised course material or class notes. It must be a direct copy, which can be a printout, photocopy or handwritten (word for word) and must not be annotated. There is no size limit on an extract; however, it must be an extract and not the full document.
- During the report stage, you will need to show your understanding by writing this description using your own words.
Report stage
Producing the report
- The report must be all your own work.
- When producing your report, you will be supervised at all times.
- You have 2 hours to complete your report.

Resources
During the report stage, you are only allowed to have certain materials.

<table>
<thead>
<tr>
<th>You can have:</th>
<th>You cannot have:</th>
</tr>
</thead>
<tbody>
<tr>
<td>♦ these instructions for candidates</td>
<td>♦ a draft of your report</td>
</tr>
<tr>
<td>♦ extracts you have gathered from the internet, books and/or journals to help</td>
<td>♦ a draft of any part of your report</td>
</tr>
<tr>
<td>♦ the experimental method</td>
<td>♦ sample calculations from any source</td>
</tr>
<tr>
<td>♦ your raw experimental data, which may be tabulated</td>
<td>♦ a table containing additional blank or pre-populated columns for mean and</td>
</tr>
<tr>
<td>♦ your internet or literature data/information</td>
<td>♦ derived values</td>
</tr>
<tr>
<td>♦ the reference to the source of this data/information</td>
<td></td>
</tr>
</tbody>
</table>

Your teacher or lecturer cannot provide you with feedback or tell you how to improve your report.
Guidance on producing your report

Your report must be easy to follow.

You may find that using headings will help to make your report clear.

**Title**
- Your title must tell the reader what your report is about.

**Aim**
- Your aim must describe the purpose of your investigation. It should refer to both the independent and dependent variables and clearly state what aspect of each is being changed/measured.

**Underlying biology**
- You must describe the biology relevant to your aim. You need a minimum of four points along with their descriptions or explanations at Higher level.
- You must use your own words as much as possible.
- Do not include a passage copied directly from your extracts. This would not show that you understand the biology.
- You can quote from sources as long as you give a description or explanation showing that you understand the biology.

**Description of experiment**
- You must give only a brief description that shows you can summarise your experimental method. You must not give a full description/set of instructions and avoid giving too much detail.
- Your summary must include the names of any chemicals used and the equipment you used to measure the dependent variable.
- You do not need to give details of the range or the number of repeats.

**Experimental data**
- You must include a table showing all of the measurements you recorded during your experiment.
- Make sure you include column headings. You must also include units, where appropriate.
- You must calculate average values from your repeated measurements and include these in your table.
Graphical presentation

❖ You must produce a graph of your experimental results.
❖ The graph must:
  — be a line graph or a bar graph, whichever is appropriate for your data
  — be large enough to allow points to be read accurately
  — have suitable scales, labels and units on the axes
  — have points that are joined with a line (line graph) or clear bar tops (bar graph)
❖ You must use graph paper or graphing software.
❖ If you are using graphing software, you must include both major and minor gridlines, and use plotting symbols that are clear but not too large.

Data/information from an internet/literature source

❖ You must include data/information from an internet/literature source that you can compare with the data from your experiment. It must be clear from what you include that this data/information is relevant to the aim of your investigation. It might be necessary for you to include a statement to explain its relevance.
❖ You must cite your internet/literature source within the body of the report, near to the relevant data/information.
❖ You can cite a source in many ways. One way is to put a number, for example (1), next to the data/information and the same number beside the reference included later in the report. A URL cannot be a citation.
❖ You must include a reference to the same source later in the report.
❖ You must include the following information in a reference:

<table>
<thead>
<tr>
<th>Source</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>website</td>
<td>full URL for the page or pages, with date accessed</td>
</tr>
<tr>
<td>journal</td>
<td>title, author, journal title, volume and page number</td>
</tr>
<tr>
<td>book</td>
<td>title, author, page number and either edition or ISBN</td>
</tr>
</tbody>
</table>

Analysis

❖ You must compare your experimental data with the data/information from your internet/literature source. You should use values for the independent variable in your comparison.
  **OR**
❖ You must include a correctly completed calculation(s) based on the experimental data, stating the values for the independent variable you used. This must be a calculation other than the average(s) you have already given. You must include a statement to link the result of the calculation(s) to the aim of the investigation.

You should include units for the independent variable (where appropriate) in your analysis.

Conclusion

You must state a conclusion that relates to your aim and is supported by all the data included in your report. This must not be a restatement of results.
Evaluation
You must make three statements, supported by justifications, which evaluate the data/information you have included.

These statements can relate to:

♦ aspects of your experimental procedure, such as controls, variables, errors and potential improvements
♦ variation in your results
♦ the data/information from your internet/literature source (not the source itself)

No more than one of your statements can evaluate data/information from your internet/literature source.
Summary

You can use this table to check you have covered all the sections in your report.

<table>
<thead>
<tr>
<th>Section</th>
<th>Description</th>
<th>Marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Title and structure</td>
<td>An informative title and a structure that can be easily followed.</td>
<td>1</td>
</tr>
<tr>
<td>Aim</td>
<td>A description of the purpose of your investigation.</td>
<td>1</td>
</tr>
<tr>
<td>Underlying biology</td>
<td>A description of the biology relevant to your aim, which shows your understanding.</td>
<td>4</td>
</tr>
<tr>
<td>Data collection and handling</td>
<td>A brief description of your experiment.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Sufficient data from your experiment.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Data from your experiment, including average values, presented in a table with headings and units.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Data/information from an internet/literature source.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>A citation for an internet/literature source and the reference later in the report.</td>
<td>1</td>
</tr>
<tr>
<td>Graphical presentation</td>
<td>Appropriate type of graph used to present your experimental data.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Suitable scales.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Suitable labels and units on axes.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>All data plotted accurately.</td>
<td>1</td>
</tr>
<tr>
<td>Analysis</td>
<td>A correct comparison of the experimental data with data/information from the internet/literature source OR a correctly completed calculation(s) based on the experimental data, linked to the aim.</td>
<td>1</td>
</tr>
<tr>
<td>Conclusion</td>
<td>A conclusion relating to your aim, based on all the data/information in your report.</td>
<td>1</td>
</tr>
<tr>
<td>Evaluation</td>
<td>Three evaluative statements supported by justifications.</td>
<td>3</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td>20</td>
</tr>
</tbody>
</table>

Once complete, give your report to your teacher or lecturer to submit to SQA.
