Number of seat

- 1 All questions should be attempted.
- 2 Necessary data will be found in the Data Booklet provided for Chemistry at Standard Grade and Intermediate 2.
- 3 The questions may be answered in any order but all answers are to be written in this answer book, and must be written clearly and legibly in ink.
- 4 Rough work, if any should be necessary, as well as the fair copy, is to be written in this book.
Rough work should be scored through when the fair copy has been written.
- 5 Additional space for answers and rough work will be found at the end of the book.
- 6 The size of the space provided for an answer should not be taken as an indication of how much to write. It is not necessary to use all the space.
- 7 Before leaving the examination room you must give this book to the Invigilator. If you do not, you may lose all the marks for this paper.

PART 1

In Questions 1 to 9 of this part of the paper, an answer is given by circling the appropriate letter (or letters) in the answer grid provided.

In some questions, two letters are required for full marks.

If more than the correct number of answers is given, marks will be deducted.

A total of 20 marks is available in this part of the paper.

SAMPLE QUESTION

A	CH ₄	B	H ₂	C	CO ₂
D	CO	E	C ₂ H ₅ OH	F	C

(a) Identify the hydrocarbon.

Ⓐ	B	C
D	E	F

The one correct answer to part (a) is A. This should be circled.

(b) Identify the **two** elements.

A	Ⓑ	C
D	E	Ⓕ

As indicated in this question, there are **two** correct answers to part (b). These are B and F.

Both answers are circled.

If, after you have recorded your answer, you decide that you have made an error and wish to make a change, you should cancel the original answer and circle the answer you now consider to be correct. Thus, in part (a), if you want to change an answer A to an answer D, your answer sheet would look like this:

Ⓐ	B	C
Ⓓ	E	F

If you want to change back to an answer which has already been scored out, you should enter a tick (✓) in the box of the answer of your choice, thus:

✓ Ⓐ	B	C
Ⓓ	E	F

1. The grid shows the names of some elements.

A	gold	B	magnesium	C	carbon
D	nitrogen	E	calcium	F	iodine

- (a) Identify the element with atomic number 79.

You may wish to use page 8 of the data booklet to help you.

A	B	C
D	E	F

1

- (b) Identify the **two** elements which exist as diatomic molecules.

A	B	C
D	E	F

1

- (c) Identify the **two** elements which have similar chemical properties.

You may wish to use page 8 of the data booklet to help you.

A	B	C
D	E	F

2. A catalyst speeds up the following reaction:

The grid shows reactions carried out using the **same** mass of catalyst with two different concentrations of hydrogen peroxide.

A	<p>hydrogen peroxide powder 1 mol/l 20 °C</p>	B	<p>hydrogen peroxide lump 1 mol/l 20 °C</p>	C	<p>hydrogen peroxide powder 1 mol/l 30 °C</p>
D	<p>hydrogen peroxide powder 2 mol/l 40 °C</p>	E	<p>hydrogen peroxide lump 2 mol/l 30 °C</p>	F	<p>hydrogen peroxide lump 2 mol/l 20 °C</p>

(a) Identify the **two** experiments which could be used to show the effect of concentration on the speed of reaction.

A	B	C
D	E	F

1

(b) Identify the experiment with the fastest speed of reaction.

A	B	C
D	E	F

4. The grid shows the names of some metals.

A	silver	B	sodium	C	magnesium
D	nickel	E	lead	F	iron

(a) Identify the metal produced in a Blast Furnace.

A	B	C
D	E	F

(b) Identify the metal that does **not** react with dilute acid.

You may wish to use page 7 of the data booklet to help you.

A	B	C
D	E	F

(c) Identify the metal that is stored under oil.

You may wish to use page 8 of the data booklet to help you.

A	B	C
D	E	F

5.

A butter melting	B distillation of crude oil
C wood burning	D water evaporating

Identify the chemical reaction.

A	B
C	D

PART 2

A total of 40 marks is available in this part of the paper.

10. An atom of fluorine can be represented by a simple diagram.

- (a) Name the structure at the centre of the atom where the positive charges are found.

1

- (b) Fluorine is found in group 7 of the Periodic Table.
Name the family of elements to which fluorine belongs.

12. (continued)

- (b) The table below gives information about some hydrocarbons obtained from the paraffins.

Name	Formula
octane	C_8H_{18}
nonane	C_9H_{20}
decane	$C_{10}H_{22}$
undecane	$C_{11}H_{24}$

Name the family of hydrocarbons in the table.

- (c) Eicosane is another member of this family.
A molecule of eicosane contains 20 carbon atoms.

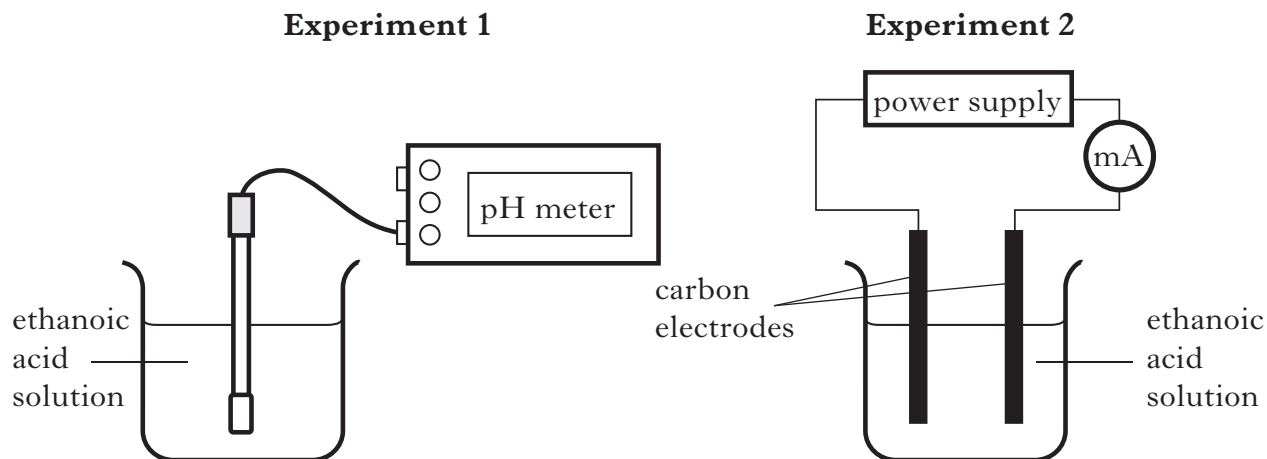

Write the molecular formula of eicosane.

[Turn over

13. Vinegar is a solution of ethanoic acid in water.

(a) A student set up the following experiments.

He tested ethanoic acid solutions of different concentrations.

His results are shown below.

Ethanoic acid solution	pH	Current/mA
A	3	18
B	4	9
C	5	5

(i) Which ethanoic acid solution is the most acidic, **A**, **B** or **C**?

1

(ii) Predict the current, in mA, for an ethanoic acid solution of pH 6.

_____ mA

1

(b) Name the ion present in all acidic solutions.

15. (a) The carbohydrate glucose is made when green plants absorb light energy from the sun.

- (i) Name the chemical, present in green plants, which absorbs light energy.

1

- (ii) Describe the chemical test, including the result, for glucose.

1

Marks

KU PS

15. (continued)

- (b) A student set up an experiment to investigate the burning of carbohydrates.

Her results are shown below.

Carbohydrate	Starting temperature of water/ $^{\circ}$ C	Final temperature of water/ $^{\circ}$ C
glucose	20	44
starch	20	56

Suggest **one** factor that the student would have kept the same to make a fair comparison.

1

- (c) **Circle** the correct words to complete the sentence.

Starch is $\left\{ \begin{array}{l} \text{sweet} \\ \text{not sweet} \end{array} \right\}$ and $\left\{ \begin{array}{l} \text{dissolves} \\ \text{does not dissolve} \end{array} \right\}$ well in water.

1

- (d) Scientists have developed a method of producing hydrocarbons from carbohydrates.

Name the element removed from a carbohydrate to produce a hydrocarbon.

16. The diagram below shows a cell.

(a) Name the type of charged particle that flows through the wires.

1

(b) The voltage of the cell shown above is 1.51 V.

Name a metal which could replace **zinc** to produce a **greater** voltage.

You may wish to use page 7 of the data booklet to help you.

1

(c) Scientists at the University of St. Andrews have developed a type of battery. It has the advantage of being able to store up to 10 times more energy than some other types of battery.

(i) Suggest another advantage of using this type of battery.

1

(ii) The chemical reaction inside this battery produces lithium oxide.
Write the formula for lithium oxide.

1

Marks

KU	PS

16. (continued)

(d) The table below shows the maximum storage life of some other types of battery.

Type of battery	Storage life/years
alkaline	5
zinc chloride	2
silver oxide	2
nickel-cadmium	7
lithium	10

Present the information as a bar chart.

Use appropriate scales to fill most of the graph paper.

18. The diagram shows an arrangement of ions in an ionic compound.

- (a) What term is given to the arrangement of ions in an ionic solid?

1

- (b) Explain why solid ionic compounds do **not** conduct electricity.

1

- (c) Many ionic compounds are coloured.

Compound	Colour
copper sulphate	blue
nickel chloride	green
sodium dichromate	orange
sodium chloride	colourless

Using the information in the table, state the colour of the chloride ion.

1

- (d) Copper can be extracted from the ionic compound copper oxide as shown.

Name **Y**.

19. (a) The table gives information on the solubility of some compounds in water.

Compound	Solubility/ grams per 100 cm ³
potassium chlorate	10.0
potassium nitrate	33.4
sodium carbonate	7.1
sodium chloride	36.5
sodium nitrate	88.6

Using the information in the table, name the **least** soluble compound.

1

19. (continued)

(b) The graph shows the solubility of sodium chloride and potassium nitrate at different temperatures.

(i) At what temperature do sodium chloride and potassium nitrate have the **same** solubility?

_____ °C

1

(ii) Write a general statement describing the effect of temperature on the solubility of potassium nitrate.

1

(3)

Marks

20. The table shows word equations for some chemical reactions.

	Word Equation	Type of chemical reaction
A	large alkane \longrightarrow smaller alkane + alkene	_____
B	lead nitrate + sodium iodide \longrightarrow sodium nitrate + lead iodide	precipitation
C	potassium hydroxide + hydrochloric acid \longrightarrow potassium chloride + _____	neutralisation

(a) In the table,

(i) write the type of chemical reaction represented by word equation **A**; **1**(ii) complete equation **C**. **1**

(b) Alkenes decolourise bromine solution.

What does this tell you about the structure of alkenes?

1(c) Name the solid produced in precipitation reaction **B**.

You may wish to use page 5 of the data booklet to help you.
