2019 Computing Science
Higher
Finalised Marking Instructions

©Scottish Qualifications Authority 2019

These marking instructions have been prepared by examination teams for use by SQA appointed markers when marking external course assessments.

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.
General marking principles for Higher Computing Science

Always apply these general principles. Use them in conjunction with the detailed marking instructions, which identify the key features required in candidates’ responses.

(a) Always use positive marking. This means candidates accumulate marks for the demonstration of relevant skills, knowledge and understanding; marks are not deducted for errors or omissions.

(b) If a candidate response does not seem to be covered by either the principles or detailed marking instructions, and you are uncertain how to assess it, you must seek guidance from your team leader.

(c) Award marks regardless of spelling, as long as the meaning is unambiguous.

(d) Candidates may answer programming questions in any appropriate programming language or pseudocode. Award marks regardless of minor syntax errors, as long as the intention of the coding is clear.

(e) For a describe question, candidates must provide a statement or structure of characteristics and/or features. This will be more than an outline or a list. It may refer to, for example, a concept, process, experiment, situation, or facts, in the context of and appropriate to the question. Candidates must make the same number of factual/appropriate points as there are marks available in the question.

(f) For an explain question, candidates must relate cause and effect and/or make relationships between things clear, in the context of the question or a specific area within the question.
Marking instructions for each question

**SECTION 1**

<table>

<tbody>
<tr>
<td>1.</td>
<td>-102</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>
| 2.       | • Both substrings  | 2        | 1 mark for each bullet  
Examples:  
shortDate = left(month,3) & right(year,2)  
shortDate = mid(month, 1, 3) & mid(year,3,2)  
shortDate = month[0:3] + year[2:4]  
shortDate = month[:3] + year[3:5] OR year[-2:]  

• Assignment and concatenation |
| 3.       | • The processor activates the read line on the control bus/the control unit activates the read line.  
• An instruction is fetched from the memory location using the data bus (and stored in the instruction register). | 2 | 1 mark for each bullet  
Read line and control bus/unit required  
From memory/to processor and data bus required |
| 4.       | • Sign bit: 0  
• Remaining 15 bits of mantissa:  
  110 0010 0000 0000  
• Exponent: 0000 0011 | 3 | 1 mark for each bullet  
(9 x 0s)  
(6 x 0s) |
| 5.       | The client:  
• Details requirements  
• Outlines scope and boundaries  
• Evaluates prototype/suggest changes  
• Provides feedback/liaising with development team throughout process | 2 | 1 mark for each bullet  
Maximum 2 marks |
| 6.       | **course** | **least expensive item** | 2 | 1 mark for each correct row  
Maximum 2 marks  
1 mark if two correct, one wrong |
<p>|          | Starter | 2.99 |
|          | Dessert | 8.99 |
| 7.       | A key comprising two or more attributes which are foreign/primary keys from other tables | 1 |</p>
<table>
<thead>
<tr>
<th>Question</th>
<th>Expected response</th>
<th>Max mark</th>
<th>Additional guidance</th>
</tr>
</thead>
</table>
| 8. (a)   | • Two drop down boxes have no indication of the inputs  
           • No context for media elements  
           • Inconsistent image alignment or size under Book Now/bottom right  
           • File formats of the media used are not specified  
           • No URLs specified for navigation links | 2 | 1 mark for each bullet  
Maximum 2 marks |
| (b)      | • Provide scenario/give prospective users a task to perform  
           • Observe users  
           • Receive feedback  
           • Identify problems with navigation eg missing/orphan pages/ hyperlink destinations  
           • Record difficulties or improvements needed | 2 | 1 mark for each bullet  
Maximum 2 marks |
|          |                   |          | No mark for testing hyperlinks without reference to destination |
| 9.       | A - Nav  
           B - Footer | 2 | 1 mark for each line  
Accept with < > |
| 10. (a)  | 2 | 1 |
| (b)      | • Use a conditional loop  
           • With termination | 2 | 1 mark for each bullet  
Termination examples include target is found, target=list[index], found =true |
| (c) (i)  | 0 | 1 |
| (ii)     | • Logic  
           • Returns a position for an item that is not in the list OR  
           Returns the position of the first item in the list/C232 | 2 | 1 mark for each bullet |
<table>
<thead>
<tr>
<th>Question</th>
<th>Expected response</th>
<th>Max mark</th>
<th>Additional guidance</th>
</tr>
</thead>
</table>
| 11. (a)  | • 200 readings/values  
• Accelerator OR brake maximum 100 (%) OR minimum 0  
• Speed minimum is 0 OR maximum dependent on car  
• Data is accurate as it is captured from sensors.  
• No input validation required | 2 | 1 mark for each bullet  
Maximum 2 marks |
| (b) (i)  | • Record structure with name  
• Four fields specified | 2 | 1 mark for each bullet  
Record structure could be Type, Structure, Class, Named Tuple  
Record name is  
Livecode  
Global CarData  
Put empty into CarData[1][speed]  
Put empty into CarData[1][accel]  
Put empty into CarData[1][brake]  
Put empty into CarData[1][seatb]  
Defining a RECORD structure does not start with DECLARE - do not award first bullet |
| (ii)     | • Array structure  
• Using data type created in (i) | 2 | 1 mark for each bullet  
Example Python:  
readings=[datatype_a() for x in range (200)]  
Example VB:  
DIM readings(199) AS datatype_a  
Example Livecode:  
Set the data of EventData to CarData |
| (c)      | • Initial set of max  
• Loop traversing array with termination  
• If condition  
• Assignment of max | 4 | 1 mark for each bullet  
Set max to first speed  
Loop to end of array  
If current speed > max then  
Set max to current speed  
(    End If  
End Loop)  
Do not penalise incorrect shapes in graphical notations. |

</tr>
</thead>
</table>
| 12. (a) | • grouping selector for header, main elements with properties  
          • additional header selector with height property | 2 | 1 mark for each bullet  
          header, main {  
          background-color:White;  
          margin-top:20px;  
          margin-bottom:20px}  
          Allow margin:20 0 20 0;  
          header {  
          height:90px}  
          header, main selector must be separated with comma |
| (b) | • Suitable control for session (radio/list)  
          • Name, Mobile, Date, Additional Information inputs  
          • Validation of any one input from bullet 2  
          • Submit button | 4 | 1 mark for each bullet  
          Date picker/calendar/formatted date validates date input |
| (c) | Presence check | 1 |  |
| (d) (i) | `<input type="number" name="days" min="1" max="7">` | 1 | Accept min and max without “ ” |
| (ii) | Change the maxlength to a more appropriate length  
          OR example: maxlength="40"  
          OR Change the maxlength to minlength  
          OR Remove maxlength | 1 |  |
| (e) | • Reduced screen area (required for large number of options)  
          • Multiple selections can be made | 2 | 1 mark for each bullet |
<p>| (f) | • Browser/device problems | 1 |  |</p>
<table>
<thead>
<tr>

</table>
| 13. (a) | • (A query to) display the total donations made to each fundraiser  
• (A query to) allow the charity to display total donations made  
• (A query to) display the total donations from a sponsor(s)  
• (A query to) display the total donations from a fundraiser(s)  
• (A query to) insert new fundraisers/sponsors or make a new donation | 2        | 1 mark for each bullet  
Maximum 2 marks                                                        |
| (b)      | ![Diagram](image)                                                                                                                                                                                                     | 2        |                                                                         |
| (c)      | • Select clause with fundraiserID field and average aggregate function with amount field  
• Alias (allow missing £ sign) and From  
• Group by fundraiserID                                                                                             | 3        | 1 mark for each bullet  
Example:  
SELECT fundraiserID,  
\text{AVG}(\text{amount})  
\text{As ‘Average Donation (£)’}  
\text{FROM Donation}  
\text{GROUP BY fundraiserID}  
Do not penalise use of extra table |
| (d)      | • Aggregate function should be MAX(amount)  
• No alias implemented (Largest donation (£))  
• Should have a Group By (Fundraiser.) name                                                                         | 3        | 1 mark for each bullet                                                  |
| (e)      | • Public key encrypts the data  
• Private key decrypts the data                                                                                                                                     | 2        | 1 mark for each bullet  
1 mark for the concept of encrypt and decrypt without assigning to appropriate keys |
<table>
<thead>
<tr>
<th>Question</th>
<th>Expected response</th>
<th>Max mark</th>
<th>Additional guidance</th>
</tr>
</thead>
</table>
| 14. (a) | • In: stars[], price[]  
• Out: position | 2 | 1 mark for each bullet  
Any additional entries in a row, award 0 marks for that row. |
| (b) | • Initialisation of position and lowest that does not cause an error ie position < 0 and lowest as a suitable high value  
• Condition stars = 5  
• Condition price < lowest value  
• Assign lowest OR use of price (position) in the condition  
• Assign position | 5 | 1 mark for each bullet  
Set position to -1  
Set lowest to 1000  
Loop for each hotel  
If current stars = 5 and current price < lowest  
Set lowest to current price  
Set position to index  
End if  
End loop  
Award 4 marks if position of price is used eg  
Set position to -1/0 (no mark)  
Loop for each hotel  
If current stars=5 and current price<price[position]  
Set position to current index  
End if  
End loop  
Do not penalise incorrect shapes in graphical notations. |
| 15. (a) | • Three arrays of 200 elements  
• Data types of each array: string, string, integer | 2 | 1 mark for each bullet |
| (b) | • initialise and increment count  
• loop with termination  
• condition matching category  
• condition matching score >= qualScore  
• output statement concatenating count, message and qualScore | 5 | 1 mark for each bullet  
DECLARE count INITIALLY 0  
RECEIVE qualScore FROM KEYBOARD  
FOR index FROM 0 to 199 DO  
If category[index] =“Junior” AND score[index]>= qualScore THEN  
SET count to count +1  
END IF  
NEXT FOR  
SEND count & “Juniors achieved the qualifying score of ”& qualScore  
Concatenation can be &, +, comma |
<table>
<thead>
<tr>
<th>Question</th>
<th>Expected response</th>
<th>Max mark</th>
<th>Additional guidance</th>
</tr>
</thead>
</table>
| 16. (a) | • 4 main pages in top level  
• 3 sub-pages from Grooming | 2 | 1 mark for each bullet |
| (b) | • background-color in header selector OR border-color  
• margin in imageBanner class  
• float:right in h1 selector | 3 | 1 mark per bullet |
| (c) (i) | • style will only apply within the (parent) nav element  
• style will apply to unordered list/list and/or anchor elements | 2 | 1 mark for each bullet  
Exemplification of bullet two is acceptable |
<p>| (ii) | The background colour changes to black and the text colour changes to white | 1 |
| (iii) | display:block | 1 |</p>
<table>
<thead>
<tr>
<th>Question</th>
<th>Expected response</th>
<th>Max mark</th>
<th>Additional guidance</th>
</tr>
</thead>
</table>
| 16. (d)  | (i)  | - Appropriate function name with parameter in brackets  
- Change source attribute of the parameter to Bailey1 image | 2 | 1 mark for each bullet  

```javascript
function mouseaway(my_image) {
  my_image.src = "../images/Bailey1.png;"
}

Accepts solution using `document.getElementById()`  

Do not penalise `{}, "", ;`  

Ensure new function is not named `rollover` |
| (ii)     |     | - Add onmouseout event to `<img>` element  
- Match function name to name created in part (i) | 2 | 1 mark for each bullet  

```html
<img id='dog1Image' src="../images/Bailey1.png" onmouseover="rollover(this)" onmouseout="mouseaway(this)" > |
| (e)      |     | Pro-active decision making by software/apps to reduce usage eg  
- automatically switch heating off/on when within range  
- monitoring/responding to external weather conditions  
- adjust heating based on historical patterns of data  
- zoned heating | 1 | 1 mark for any one bullet |
<table>
<thead>
<tr>

</table>
| 17. (a) | - forename, surname, SUM(lessonDuration)  
- selection of date in search  
- grouping by forename and surname | 3 | 1 mark for each bullet  
Date selection may be between, range and use wildcards (* ?? %) |
| (b) | - SUM aggregate function  
- Calculation of lessonDuration * 35  
- Alias and Booking table | 3 | 1 mark for each bullet  
Example:  
SELECT SUM(lessonDuration*35) AS 'Total Payments'  
FROM Booking;  
Note can be (lessonDuration) * 35 |
| (c) | - UPDATE Customer table  
- SET new address and postcode values  
- WHERE criteria based on forename and surname OR customer ID | 3 | 1 mark for each bullet  
Example:  
UPDATE Customer  
SET Address = '27 Drummer Street', Postcode = 'AB33 7QR'  
WHERE forename = 'Simon' AND surname = 'Wenger'  
OR customerID = 2 |
| (d) | - forename, surname and COUNT function on any field  
- Tables(s): Instructor and Booking  
- Grouping: forename and surname  
- Sort Order: Count of field descending | 4 | 1 mark for each bullet  
COUNT function can be applied to any field or *  
Accept ALIAS in the Sort Order |
