## Electronics: Circuit Construction (National 4)

**SCQF:** level 4 (6 SCQF credit points)

**Unit code:** J9L5 74

### Unit outline

The general aim of this Unit is to develop skills in assembling a range of electronic circuits, using permanent and non-permanent methods, to construct complete working devices. Learners will also develop skills in testing and fault-finding.

Learners who complete this Unit will be able to:

- 1 Plan the construction of electronic circuits
- 2 Construct working electronic circuits
- 3 Test electronic circuits

This Unit is a mandatory Unit of the Electronics (National 4) Course and is also available as a free-standing Unit. The Unit Specification should be read in conjunction with the *Unit Support Notes*, which provides advice and guidance on delivery, assessment approaches and development of skills for learning, skills for life and skills for work. Exemplification of the standards in this Unit is given in *Unit Assessment Support*.

The *Added Value Unit Specification* for the Electronics (National 4) Course gives further mandatory information on Course coverage for learners taking this Unit as part of the Electronics (National 4) Course.

## Recommended entry

Entry to this Unit is at the discretion of the centre. However, learners would normally be expected to have attained the skills, knowledge and understanding required by one or more of the following or equivalent qualifications and/or experience:

- ◆ Numeracy (SCQF level 3)

In terms of prior learning and experience, relevant experiences and outcomes may also provide an appropriate basis for doing this Unit.

## Equality and inclusion

This Unit Specification has been designed to ensure that there are no unnecessary barriers to learning or assessment. The individual needs of learners should be taken into account when planning learning experiences, selecting assessment methods or considering alternative evidence. For further information, please refer to the *Unit Support Notes*.

# Standards

## Outcomes and Assessment Standards

### Outcome 1

The learner will:

#### **1 Plan the construction of electronic circuits by:**

- 1.1 Listing and sourcing the required components
- 1.2 Interpreting a layout diagram

### Outcome 2

The learner will:

#### **2 Construct working electronic circuits by:**

- 2.1 Inserting components on to prototype board to a given layout
- 2.2 Soldering components on to stripboard or pre-printed PCB to a given layout
- 2.3 Applying a range of wiring techniques
- 2.4 Applying safe working practices

### Outcome 3

The learner will:

#### **3 Test electronic circuits by:**

- 3.1 Following a testing checklist
- 3.2 Using continuity testers to check if circuits are open or closed
- 3.3 Using multimeters to measure resistance, current and voltage

For this Unit, typical circuits should involve a power supply, marking out of stripboard, placement and soldering of components, cutting track and wiring techniques between boards, where required.

## Evidence Requirements for the Unit

Assessors should use their professional judgement, subject knowledge and experience, and understanding of their learners, to determine the most appropriate ways to generate evidence and the conditions and contexts in which they are used.

For this Unit, learners will be required to demonstrate the ability to plan, construct and test electronic circuits, applying safe working practices. Evidence may be observational, obtained while the learner is carrying out appropriate practical tasks.

Exemplification of assessment is provided in *Unit Assessment Support*. Advice and guidance on possible approaches to assessment is provided in the *Unit Support Notes*.

If a candidate successfully meets the requirements of the specified number of Assessment Standards they will be judged to have passed the Unit overall and no further re-assessment will be required.

The specific requirements for this Unit is as follows:

- ◆ 7 out of 9 Assessment Standards must be achieved.

It should be noted that there will still be the requirement for candidates to be given the opportunity to meet all Assessment Standards. The above threshold has been put in place to reduce the volume of re-assessment where that is required.

## Development of skills for learning, skills for life and skills for work

It is expected that learners will develop broad, generic skills through this Unit. The skills that learners will be expected to improve on and develop through the Unit are based on SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work* and drawn from the main skills areas listed below. These must be built into the Unit where there are appropriate opportunities.

### **2 Numeracy**

2.3 Information handling

### **5 Thinking skills**

5.2 Understanding

5.3 Applying

Amplification of these is given in SQA's *Skills Framework: Skills for Learning, Skills for Life and Skills for Work*. The level of these skills should be at the same SCQF level of the Unit and be consistent with the SCQF level descriptor. Further information on building in skills for learning, skills for life and skills for work is given in the *Unit Support Notes*.

# Administrative information

---

**Published:** January 2026 (version 3.0)

---

## History of changes to National Unit Specification

Version	Description of change	Date
1.1	Assessment Standard threshold added.	September 2018
2.0	References to 'basic' and 'simple' removed from Outcomes 1, 2, and 3, and throughout Unit Specification.  Assessment Standard 1.2, 'Choosing, with guidance, a construction method', removed and subsequent Assessment Standard renumbered. Assessment Standard threshold updated accordingly.  Assessment Standards 3.2 and 3.3 reworded to clarify their requirements.	May 2024
3.0	We have removed 'Practical' from the course and unit names and changed the course and unit codes.  <b>What you need to do differently</b> There is no impact on teaching, learning or assessment, however, you must use the new codes for entries.	January 2026
